

**Analyze**

1. See Data Table.
2. See Data Table.
3. See Data Table. Sample Calculation for Pluto:  $e = 4/16 = 0.25$
4. See Data Table.
5. Both foci are at the center.
6. It is very close to being a circle.
7. The comet. It looks more flattened out than the other orbits.

**Conclude and Apply**

1. Yes, the planets and comet travel in elliptical orbits.
2. Since the eccentricity of Earth is so small, Kepler might not have concluded that planets have elliptical orbits.
3. It travels fastest at perihelion. According to Kepler's second law, equal areas are swept out in equal time. Since there is less area available at perihelion, the planet must move faster.
4.  $\frac{v_P}{v_A} = \frac{A}{P} = \frac{10.0}{6.0} = \frac{1.7}{1}$
5.  $v_A = \text{minimum velocity}$   
 $= 3.7 \text{ km/s}$   
 $v_P = 1.7 \times v_A$   
 $= 1.7 \times 3.7 \text{ km/s}$   
 $= 6.3 \text{ km/s}$

**Going Further**

1. Collect data using dates of location of a planet. Use areas and dates to confirm the second law.
2. In order to show the third law, a computer model would have a planet actually moving so that periods and distances could be measured.

**Real-World Physics**

Students can research elliptical orbits of satellites. Encourage the students to pick one or two satellites and, if possible, plot orbit data to determine the path that each satellite takes.

**Neural Information Processing** Mufti Mahmud, Maryam Doborjeh, Kevin Wong, Andrew Chi Sing Leung, Zohreh Doborjeh, M. Tanveer, 2025-07-23 The sixteen volume set CCIS 2282 2297 constitutes the refereed proceedings of the 31st International Conference on Neural Information Processing ICONIP 2024 held in Auckland New Zealand in December 2024 The 472 regular papers presented in this proceedings set were carefully reviewed and selected from 1301 submissions These papers primarily focus on the following areas Theory and algorithms Cognitive neurosciences Human centered computing and Applications Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i e extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation

**Challenges of Teaching with Technology Across the Curriculum: Issues and Solutions** Tomei, Lawrence A., 2002-07-01 Teachers are looking for a text that will guide them in the selection of appropriate educational software and help them make decisions about the myriad of available Internet sites They want to know how all this material can help their students learn better This text integrates both theory and practice with assessment to make learning outcomes possible

**Physics with Modern Physics for Scientists and Engineers** Richard Wolfson, Jay M. Pasachoff, 1999 *Smart Robust Operation and Trading of Integrated*

*Energy Systems with Low Pollution Goals* Kaiping Qu, Yue Zhou, Xin Fang, Shuli Wen, Shiwei Xie, 2024-09-23 To mitigate two major environmental concerns of global warming and air pollution renewable energies with uncertainty are increasingly deployed in power systems which challenge the system's secure operation A single system usually has limited adjusting ability In contrast integrated energy systems such as electricity gas electricity traffic electricity heat and transmission distribution coordinated systems enhance the regulating ability of renewable energy accommodation and environmental protection The operation of integrated energy systems will meet three essential requirements low pollution attribute robustness and cooperativity However the diversity of uncertainty conditions the complementarity of new energy accommodation among systems the conflict of interest between systems and the dispatch autonomy of systems challenge the requirements mentioned above The main goal of this Research Topic includes 1 Propose more effective trading mechanisms or control strategies for carbon and air pollutant emissions 2 Fully use complementary effects between electric power natural gas heat hydrogen and traffic systems 3 Realize the coordinated operation of integrated energy systems with limited information interaction and ensured dispatch autonomy 4 Improve the robustness of integrated energy systems under diversified uncertainty conditions 5 Apply data based reinforcement learning methods for the dynamic decision of smart integrated energy systems under complex environments

**A User's Guide to Ellipsometry** Harland G. Tompkins, 2006-07-07 This text on optics for graduate students explains how to determine material properties and parameters for inaccessible substrates and unknown films as well as how to measure extremely thin films Its 14 case studies illustrate concepts and reinforce applications of ellipsometry particularly in relation to the semiconductor industry and to studies involving corrosion and oxide growth A User's Guide to Ellipsometry will enable readers to move beyond limited turn key applications of ellipsometers In addition to its comprehensive discussions of the measurement of film thickness and optical constants in film it also considers the trajectories of the ellipsometric parameters  $\Delta$  and  $\Psi$  and how changes in materials affect parameters This volume also addresses the use of polysilicon a material commonly employed in the microelectronics industry and the effects of substrate roughness Three appendices provide helpful references

*Probabilistic Metric Spaces* B. Schweizer, A. Sklar, 2011-10-14 This distinctly nonclassical treatment focuses on

developing aspects that differ from the theory of ordinary metric spaces working directly with probability distribution functions rather than random variables The two part treatment begins with an overview that discusses the theory's historical evolution followed by a development of related mathematical machinery The presentation defines all needed concepts states all necessary results and provides relevant proofs The second part opens with definitions of probabilistic metric spaces and proceeds to examinations of special classes of probabilistic metric spaces topologies and several related structures such as probabilistic normed and inner product spaces Throughout the authors focus on developing aspects that differ from the theory of ordinary metric spaces rather than simply transferring known metric space results to a more general setting

**Mathematics of Relativity** George Yuri Rainich, 2014-08-20 Concise treatment based on ideas of Einstein and Minkowski geared toward advanced undergraduates and graduate students of physics Topics include old physics new geometry special relativity curved space and general relativity 1950 edition     [A Short Course in Automorphic Functions](#) Joseph Lehner, 2015-01-21 Concise treatment covers basics of Fuchsian groups development of Poincaré series and automorphic forms and the connection between theory of Riemann surfaces with theories of automorphic forms and discontinuous groups 1966 edition     **Theoretical Kinematics** O. Bottema, B.
