Vannamei Hatchery Manual:

Design, Operation and Training Manual for an Intensive Culture Shrimp Hatchery Granvil Dean Treece, Joe M. Fox, 1999-06 Covers two species *Penaeus monodon* and *Penaeus vannamei* It is organized into three main parts Design Operation and Training The design part focuses on two hatcheries and gives detailed plans of their construction as well as other options The operation portion of the manual details the procedures for most efficient operation of a specific hatchery This manual consists of compiled presently known information important for training new personnel Contains enough detail to provide the newcomer with knowledge to run a hatchery and provides details to assist the experienced hatchery manager Illustrated **Manual on Artemia production and use** Van Stappen, G., Sorgeloos, P., Rombaut, G., 2024-05-31 This FAO publication on brine shrimp is a manual for all those who are using *Artemia* or have an interest in this organism whether as a source of live food in the hatchery as a model organism in research or for other purpose Author It is intended for those who wish to update their knowledge on its biology production or its use but also for those who want to learn about *Artemia* for the first time Author A team of leading *Artemia* experts from around the globe with diverse backgrounds expertise and working in research education and or the industry have jointly contributed to its writing Author This manual presents in a concise form essential information on *Artemia* biology and the most important natural cyst resources that find their way to the aquaculture market Author It also provides detailed information on general principles and practical procedures to produce *Artemia* in ponds and in tank systems Author Finally the manual offers a compilation of state of the art guidelines and methodologies related to the use of this crucial live food organism in aquaculture Author The illustrations tables and practical worksheets will help the reader to implement the correct procedures in the production and use of *Artemia* Author This publication is a must for anyone working with this unique organism Author **Health Management and Biosecurity Maintenance in White Shrimp (*Penaeus Vannamei*) Hatcheries in Latin America** Food and Agriculture Organization of the United Nations. Inland Water Resources and Aquaculture Service, Food and Agriculture Organization of the United Nations, 2003 This publication contains technical guidance on the effective and responsible operation of shrimp hatcheries in Latin America compiled through an extensive consultative process undertaken during 2001-03 including contributions from government designated national coordinators regional and international experts intergovernmental organisations and the private sector This process was carried out through the FAO Regional Technical Cooperation Programme project which involved the participation of 14 countries of the region **Improving *Penaeus Monodon* Hatchery Practices**, 2007-01-01 The successful farming of tiger shrimp *Penaeus monodon* in India is mainly due to the existence of some 300 hatcheries whose capacity to produce 12 000 million postlarvae PL annually has provided an assured supply of seed However the sustainability of the sector is still hampered by many problems foremost among these being a reliance on wild caught broodstock whose supply is limited both in quantity and in seasonal availability and that are often infected with pathogens

The current low quality of hatchery produced PL due to infection with white spot syndrome virus WSSV and other pathogens entering the hatcheries via infected broodstock contaminated intake water or other sources due to poor hatchery management practices including inadequate biosecurity is a major obstacle to achieving sustainable shrimp aquaculture in India and the Asia Pacific region. Considering the major contribution of the tiger shrimp to global shrimp production and the economic losses resulting from disease outbreaks it is essential that the shrimp farming sector invest in good management practices for the production of healthy and quality seed. This document reviews the current state of the Indian shrimp hatchery industry and provides detailed guidance and protocols for improving the productivity, health management, biosecurity and sustainability of the sector. Following a brief review of shrimp hatchery development in India, the major requirements for hatchery production are discussed under the headings: infrastructure, facility maintenance, inlet water quality and treatment, wastewater treatment, biosecurity, standard operating procedures (SOPs), the Hazard Analysis Critical Control Point (HACCP) approach, chemical use during the hatchery production process and health assessment. Pre-spawning procedures covered include the use of wild domesticated and specific pathogen free (SPF) specific pathogen resistant (SPR) broodstock, broodstock landing centres and holding techniques, broodstock selection, transport, utilization, quarantine, health screening, maturation, nutrition and spawning, egg hatching, nauplius selection, egg nauplius disinfection and washing and holding, disease testing and transportation of nauplii. Post-spawning procedures covered include larval rearing unit preparation, larval rearing, health management, larval nutrition and feed management, important larval diseases, general assessment of larval condition, quality testing, selection of PL for stocking, PL harvest and transportation, nursery rearing, timing of PL stocking, use of multiple species in shrimp hatcheries and documentation and record keeping. Information on the use of chemicals in shrimp hatcheries and examples of various forms for hatchery record keeping are included as Annexes.

Shrimp infectious myonecrosis strategy manual Food and Agriculture Organization of the United Nations, 2019-09-30. This Shrimp infectious myonecrosis strategy manual provides key information for national policy makers relevant to the development of contingency plans for countries, producers and other stakeholders with regard to outbreaks of infectious myonecrosis (IMN), a viral disease of farmed marine penaeid shrimp that is listed by the World Organisation for Animal Health (OIE). IMN is a viral disease discovered in 2002 that has caused substantial mortalities in populations of cultured Pacific whiteleg shrimp *Penaeus vannamei* initially reported in Brazil 2002 and Indonesia 2006 and recently in India 2016 and Malaysia 2018. The purpose of this manual is to provide support for the various components of a national contingency plan. The information provided includes: 1) the nature of IMN providing a brief review of disease etiology, susceptible species and global distribution; 2) diagnosis of infection describing the gross clinical signs of disease, field diagnostic methods, differential and laboratory methods for diagnosis; 3) prevention and treatment providing information on vaccination and resistance and immunity of the hosts; 4) epidemiology providing information on IMNV's geographic distribution, persistence in the

environment modes of transmission vectors and reservoir hosts factors influencing disease transmission and expression and impact of the disease 5 principles of control and eradication describing the methods and 6 policy development and implementation summarizing the overall policy IMN specific objectives problems overview of response options strategies for eradication and control capacity building and funding and compensation *CRC Handbook of Mariculture* James P. McVey, 1993-04-26 The Second Edition of the CRC Handbook of Mariculture provides an extensive comparison of marine shrimp culture techniques from around the world This extensively revised and updated Second Edition focuses on growout systems that have contributed to the production success of shrimp farms and systems worldwide Topics covered include methods for the culture and preparation of algae rotifers Artemia and other foodstuffs for use in crustacean farms recent developments on enriching larval food organisms to improve crustacean diets conditioning and spawning penaeid shrimp obtaining and manipulating shrimp eggs and sperm for controlled reproduction and use of intensive nursery raceways for juvenile shrimp production and discussions of many types of marine shrimp growout systems In addition culture systems used in Hawaii Ecuador Taiwan and Japan are described in detail Significant new information from Japan on hormonal control of penaeid shrimp maturation and spawning is discussed Marine shrimp and Macrobrachium shrimp diseases by the foremost authorities in the area are presented with detailed photographs and illustrations to help identify diseases The book also includes an update on American lobster larval and juvenile culture **Texas Shrimp Farming Manual** George William Chamberlain, Michael George Haby, Russell J. Miget, 1985 **Crustacean Farming** John F. Wickins, Daniel O'C. Lee, 2008-04-15 Crustacean Farming Ranching and Culture Second edition John F Wickins and Daniel O C Lee The second edition of an extremely well received book Crustacean Farming deals with all cultivated crustaceans of commercial significance shrimp prawns crayfish lobsters crabs and spiny lobsters and examines the criteria by which both the feasibility and desirability of farming proposals are assessed The characteristics and production methods of farmed and candidate crustacean species are described in sufficient detail to enable areas of profitable involvement to be distinguished from other opportunities presenting only very high risks and possibilities for serious loss Coverage extends right from broodstock acquisition and management through to the operation of hatcheries nurseries and on growing units to key aspects of processing and marketing New to this second edition are ranching and re stocking operations together with the culture of ornamental shrimp and small crustaceans used as live food in fish and shellfish hatcheries The sections on crustacean diseases genetics and nutrition have been extended in the light of recent research advances Examples of investment and operating costs of the different culture options are compared and an analysis of current trends in world crustacean markets is presented to assist in economic and financial appraisal Special consideration is given to the place of crustacean farming within the economics of developing nations in relation to social and environmental impact in order to promote awareness of the wider implications of global developments The consequences of recent research and technical developments are

considered together with concerns over genetic and animal welfare issues Specific areas where further advances in technology are needed to improve the reliability or productivity of farming systems are highlighted This important book is a vital tool and reference work for all those involved with crustacean farming worldwide *World Shrimp Culture: pt.1. Shrimp acute hepatopancreatic necrosis disease strategy manual Food and Agriculture Organization of the United Nations, 2020-11-24 The contents of this Shrimp acute hepatopancreatic necrosis disease strategy manual provides information and guidance relevant to the development of policies to respond to outbreaks of acute hepatopancreatic necrosis disease AHPND in farmed marine shrimp The etiologic agents for AHPND are virulent strains of bacteria belonging to the genus *Vibrio* *parahaemolyticus* and related species which harbor specific toxin genes While these bacterial species are part of the normal microflora of the marine environment they may cause substantial mortalities in whiteleg shrimp *Penaeus vannamei* and giant tiger prawn *Penaeus monodon* cultured in countries in Asia and the Americas These strains of these *Vibrio* bacteria secrete a PirABvp binary toxin resulting in sloughing of tubule epithelial cells and dysfunctions of the hepatopancreas in the acute form mortality can reach 100 percent in affected ponds Chronic presentation of this disease involves secondary bacterial infection of hepatopancreas and running mortality over the culture cycle Acute or chronic

presentation would greatly depend on the culture conditions This disease can be considered a toxicosis rather than an infection Economic losses due to this disease have amounted to over USD 7 billion annually Further outbreaks of AHPND particularly in areas that are currently free of the disease would be expected to experience similar devastating effects on local shrimp producers and the surrounding communities and thus there is an urgent need to develop a contingency plan to control and eradicate this disease This manual includes information on 1 the nature of AHPND a brief review of current knowledge in disease etiology susceptible species and global distribution 2 diagnosis of disease a description of gross clinical signs and laboratory methods 3 prevention and treatment farm management the use and development of antibiotics bacteriophages probiotics disease tolerant shrimp shrimp immunity and vaccination 4 epidemiology AHPND s geographic distribution genotype persistence in the environment reservoir hosts modes of transmission risk factors and economic impacts 5 principles of control and eradication methods for containment mitigation and eradication of AHPND and trade and industry considerations and 6 policy development and implementation AHPND specific objectives options and strategies for eradication and control education capacity building funding and compensation
