Vector Biology Ecology And Control:

Vector Biology, Ecology and Control Peter W. Atkinson, 2009-12-12 Mir S Mulla joined the faculty of the Entomology Department at the University of California Riverside in 1956 only two years after the Riverside campus was established as an independent campus within the University of California system Prior to his appointment Mir received his B S from Cornell University and then moved to the University of California Berkeley to pursue his graduate studies His Ph D from Berkeley awarded in 1955 completed his formal American education which was the purpose of his immigration from his native Kandahar in Afghanistan In his over 50 years at Riverside Mir has made an incalculable impact on vector biology both within the United States and in developing countries throughout the world Within Southern California Mir's basic and applied research led to the rapid and sustainable control of mosquitoes and eye gnats in the Coachella Valley and so directly enabled this region to grow to the thriving large community it is today In 2006 his efforts in facilitating the development of the low desert of southern California were recognized through the dedication of the Mir S Mulla Biological Control Facility by the Coachella Valley Mosquito and Vector Control District His success has been so profound that it remains somewhat cryptic to the many who now reside in visit and enjoy this region of California oblivious to the insect problems that severely restrained development until Mir and his students first applied their expertise many decades ago Integrated Vector Management

Graham Matthews, 2011-08-17 Diseases transmitted by insects continue to have a major impact on human populations Malaria dengue onchocerciasis sleeping sickness and leishmaniasis all adversely affect man Malaria is one of the most important causes of child mortality and reduces economic development in many countries with agricultural productivity often greatly reduced as many vectors are active in the wet season favourable for crop production Vector control is crucial to reduce the extent to which drugs are needed to treat the diseases as the parasite can become resistant or the drugs are often too expensive for those living in rural areas and urban slums most affected by these diseases Chemical control of vectors is often the only method that can reduce vector populations in a disease epidemic but with vectors developing resistance to insecticides there is increasing awareness that a single control method is often insufficient and also that chemical control must be integrated where possible with other control measures In Integrated Vector Management Graham Matthews covers the main chemical methods of vector control including the use of indoor residual spraying space treatments the use of treated bed nets and larviciding but also stresses the importance of drainage schemes and improvement of houses to prevent access of indoor vectors techniques that have largely been responsible for reducing the risk of vector borne diseases in Europe and the USA This book combines practical information from successful vector control programmes including early use of DDT and recent research into a vital resource for all those now involved in combating insect vector borne diseases Integrated Vector Management is an essential tool not only for medical entomologists and those directly involved in government health departments but also for all those who provide the skills and management needed to operate successful

area wide vector management programmes Libraries in all universities and research establishments world wide where biological sciences medicine and agriculture are studied and taught should have multiple copies of this important book

Public health pesticide management: a course module World Health Organization, 2023-11-22 The course module provides the students with the knowledge and skills for developing and implementing effective strategies to control disease vectors and domestic pests e g integrated vector management with emphasis on improved management of public health pesticides throughout their life cycle Alternative methods and strategies for pest and vector control their cost effectiveness and their sustainability are discussed Students will also examine the WHO strategies policies and guidelines for using pesticides in public health This course was first developed in 2012 by the World Health Organization WHO in collaboration with the University of Cape Town South Africa and was revised in 2015 The current version incorporates major revisions and updates of the course material

Ecology of parasite-vector interactions Willem Takken, Sander Koenraadt, 2013-03-15 Vector borne diseases continue to be one of the most important determinants affecting human and animal health Large numbers of people suffer from diseases like malaria dengue filariasis and leishmaniasis especially in the tropics Whereas these diseases were eradicated from the temperate climate zones in recent years the rising incidence of emerging vector borne diseases such as bluetongue West Nile Virus Lyme disease tick borne encephalitis and the recent outbreaks of chikungunya and dengue in southern Europe provide evidence that these diseases are resilient and can disperse to other regions and continents where before they were not present or relevant Many tools for the management of vector borne diseases are currently under pressure because of increasing drug and insecticide resistance as well as the realization of biological variation of parasites and vectors and their ecosystems At the same time progress in our understanding of genetics immunology population biology and epidemiology allow for a better understanding of parasite vector interactions Here the state of the art of these interactions is being reviewed and means for using this information for advanced strategies of vector borne disease control are proposed This 3rd edition of ECVD aims to provide a rapid overview of recent developments in the field of parasite vector interactions and how this can be used for more effective and sustainable disease control

Subject access A-H** , 1992 *Vector Control in Primary Health Care* , 1987 **Population Biology of Vector-Borne Diseases** John M. Drake, Michael Bonsall, Michael R. Strand, Michael Strand, 2021 Population Biology of Vector Borne Diseases is the first comprehensive survey of this rapidly developing field The chapter topics provide an up to date presentation of classical concepts reviews of emerging trends synthesis of existing knowledge and a prospective agenda for future research The contributions offer authoritative and international perspectives from leading thinkers in the field The dynamics of vector borne diseases are far more intrinsically ecological compared with their directly transmitted equivalents The environmental dependence of ectotherm vectors means that vector borne pathogens are acutely sensitive to changing

environmental conditions Although perennially important vector borne diseases such as malaria and dengue have deeply informed our understanding of vector borne diseases recent emerging viruses such as West Nile virus Chikungunya virus and Zika virus have generated new scientific questions and practical problems The study of vector borne disease has been a particularly rich source of ecological questions while ecological theory has provided the conceptual tools for thinking about their evolution transmission and spatial extent Population Biology of Vector Borne Diseases is an advanced textbook suitable for graduate level students taking courses in vector biology population ecology evolutionary ecology disease ecology medical entomology viral ecology evolution and parasitology as well as providing a key reference for researchers across these fields
