

The globe of the Moon has a radius of 10 inches. Find the volume of the globe. Round your answer to the nearest hundredths and use

3.14 for pi

$$V = \frac{4}{3} \pi r^3$$

① find r

$$r = 10$$

② Use the formula

$$V = \frac{4}{3} \pi r^3$$

$$V = \frac{4}{3} (3.14) (10)^3$$

$$V = 4186.67 \text{ in}^3$$

**Fundamentals of Probability: A First Course** Anirban DasGupta, 2010-04-02 Probability theory is one branch of

mathematics that is simultaneously deep and immediately applicable in diverse areas of human endeavor It is as fundamental as calculus Calculus explains the external world and probability theory helps predict a lot of it In addition problems in probability theory have an innate appeal and the answers are often structured and strikingly beautiful A solid background in probability theory and probability models will become increasingly more useful in the twenty first century as difficult new problems emerge that will require more sophisticated models and analysis This is a text on the fundamentals of the theory of probability at an undergraduate or first year graduate level for students in science engineering and economics The only mathematical background required is knowledge of univariate and multivariate calculus and basic linear algebra The book covers all of the standard topics in basic probability such as combinatorial probability discrete and continuous distributions moment generating functions fundamental probability inequalities the central limit theorem and joint and conditional distributions of discrete and continuous random variables But it also has some unique features and a forward looking feel

**Problems on Mapping Class Groups and Related Topics** Benson Farb, 2006-09-12 The appearance of mapping class groups in mathematics is ubiquitous The book presents 23 papers containing problems about mapping class groups the moduli space of Riemann surfaces Teichmüller geometry and related areas Each paper focusses completely on open problems and directions The problems range in scope from specific computations to broad programs The goal is to have a rich source of problems which have been formulated explicitly and accessibly The book is divided into four parts Part I contains problems on the combinatorial and cohomological group theoretic aspects of mapping class groups and the way in which these relate to problems in geometry and topology Part II concentrates on connections with classification problems in 3 manifold theory the theory of symplectic 4 manifolds and algebraic geometry A wide variety of problems from understanding billiard trajectories to the classification of Kleinian groups can be reduced to differential and synthetic geometry problems about moduli space Such problems and connections are discussed in Part III Mapping class groups are related both concretely and philosophically to a number of other groups such as braid groups lattices in semisimple Lie groups and automorphism groups of free groups Part IV concentrates on problems surrounding these relationships This book should be of interest to anyone studying geometry topology algebraic geometry or infinite groups It is meant to provide inspiration for everyone from graduate students to senior researchers
