

VOLVO PENTA INBOARD DIESEL

D4-300

221 kW (300 hp) crankshaft power acc. to ISO 8655

NEW!

Exceptional diesel performance for its size

Volvo Penta's 4-cylinder D4-300 is developed from the latest design in modern diesel technology. The engine has common rail fuel injection system, double overhead camshafts, 4 valves per cylinder, turbo-charger and aftercooler. Together with a large swept volume and the EVC system (Electronic Vessel Control®), this results in world-class diesel performance, combined with low emissions. The engine is extremely compact for its high output.

World-class performance

The common rail fuel injection system, controlled by EVC, in combination with a large swept volume, ensures outstanding torque during acceleration, with virtually no sign of smoke. This matched with the engine's high load carrying capability creates a sporty feeling and power, when needed.

Compact and robust

The engine is extremely compact for its large swept volume and high output. With the rear-end transmission, driving the high-pressure injection pump and the camshafts, a high degree of integrated systems, a high-efficiency aftercooler, a maximization performed with very few hoses, and a fully symmetric engine, the package simply gets that compact.

The rigid cast-iron cylinder block and head, combined ladder frame and balance shafts, and exactly controlled (up to three steps) fuel injection gives excellent onboard comfort with low noise and vibration levels.

EVC-E

The next generation of the proven Electronic Vessel Control offers further enhancements to the driver experience. The robust E-key with touch less technology is standard.

Ergonomically designed controls engage smoothly and allow for maneuvering with fingertip precision. Pushbuttons integrated on the control give easy access to optional functions such as Low Speed and Single Lever Control.

D4-300 with Volvo Penta reverse gear

Complete the helm with your choice of easy to read gauges and displays, including the 7" color display. Add the trip computer function for accurate fuel management and minimized environmental impact. Engine synchronization is standard in twin installations.

A propulsion package fully matched, tested and supported by one company

Volvo Penta's hydraulically shifted reverse gear has been specially developed with a view to increasing the standard of comfort on board.

Matched with the characteristics of the D4 engine, the hydraulic shifting mechanism and a gear technology that uses bevel gears throughout the gear train, we have developed a complete package for high torque, operational reliability and reduction of engine noise and vibrations.

The combination of 8° down angle, large drop center and small dimensions provides for optimized installations. V-drives are also available.

In order to get full benefit of the EVC system the reverse gear is equipped with electric shifting valve.

Meeting new emission standards

The common rail injection system in combination with electronics and an advanced combustion system are setting new standards in minimizing noxious emissions and particulates. The engine complies with IMO NOx limits and the comprehensive emission requirements EU RCD and US EPA Tier 3.
