

WAVES

THE NATURE AND PROPERTIES OF WAVES

Waves can carry energy and information from one place to another. We can describe a wave by their amplitude (the maximum displacement of a point from its equilibrium point), their wavelength λ (the distance between the same point on two consecutive waves), their frequency f (the number of waves passing through a point each second, and their period T (the time that it takes for a whole wave to pass through a single point).

The relationship between period and frequency is given by

$$\text{Period} = \frac{1}{f} \qquad T = \frac{1}{f}$$
