Haynor, Pierre Hellier, 2011-04-05 The 7th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI 2004 was held in Saint Malo Brittany France at the Palais du Grand Large conference center September 26-29 2004 The proceedings of MICCAI 2004 were strongly encouraged and supported by IRISA Rennes IRISA is a publicly funded national research laboratory with a staff of 370 including 150 full time research scientists and 115 postgraduate students INRIA the CNRS and the University of Rennes 1 are all partners in this mixed research unit and all three organizations were helpful in supporting MICCAI MICCAI has become a premier international conference with in depth papers on the multidisciplinary fields of medical image computing computer assisted intervention and medical robotics The conference brings together clinicians biological scientists computer scientists engineers physicists and other researchers and offers them a forum to exchange ideas in these exciting and rapidly growing fields The impact of MICCAI increases each year and the quality and quantity of submitted papers this year was very impressive We received a record 516 full submissions 8 pages in length and 101 short communications 2 pages from 36 different countries and 5 continents see figures below All submissions were reviewed by up to 4 external reviewers from the Scientific Review Committee and a primary reviewer from the Program Committee All reviews were then considered by the MICCAI 2004 Program Committee resulting in the acceptance of 235 full papers and 33 short communications **Detection of Fetal Abnormalities Based on Three Dimensional Nuchal Translucency** Khin Wee Lai, Eko Supriyanto, 2012-10-29 Ultrasound US prenatal screening has been proposed as the most effective technique for Trisomy 21 early assessment Assessment of Nuchal Translucency NT offers promising non invasive method for fetal abnormalities detection up to 75% Nevertheless current clinician practice of NT examination by locating the sonogram calipers on 2D US image requires highly trained and competent operators by adhering to a standard tedious protocol therefore it is prone to errors and hence it decreases the reliability in intra and inter observer repeatability This Brief provides the basic knowledge regarding Trisomy 21 diseases and its existing detection methods The restrictions and disadvantages of each method are discussed accordingly Therefore a non invasive early detection method using 3D ultrasound reconstruction of Nuchal Translucency is introduced This new method for 3D NT assessments has an edge over

the previous 2D methods and entails the composite function in visualizing the explicit internal marker structure Further image processing techniques covered from data acquisition pre processing speckle noise reduction and 3D segmentation are also discussed This should be especially useful for students and professional researchers in the Biomedical and image processing fields

Sonography Kerry Thoirs,2012-02-03 Medical sonography is a medical imaging modality used across many medical disciplines Its use is growing probably due to its relative low cost and easy accessibility There are now many high quality ultrasound imaging systems available that are easily transportable making it a diagnostic tool amenable for bedside and office scanning This book includes applications of sonography that can be used across a number of medical disciplines including radiology thoracic medicine urology rheumatology obstetrics and fetal medicine and neurology The book revisits established applications in medical sonography such as biliary testicular and breast sonography and sonography in early pregnancy and also outlines some interesting new and advanced applications of sonography

CARS 2004 H. U. Lemke, Heinz U. Lemke,2004 Almost 500 paper and poster contributions from more than 30 countries had to be evaluated for CARS 2004 In addition to the traditional CARS themes and topics emphasis has been given to developments such as IHE Surgical Workflow and PACS Operation Room of the Future and Strategic Thinking In special congress sessions partner societies such as SPIE and SCAR have joined these endeavours to assist in achieving progress in these fields While the increased reliance on multi source information is proceeding at a rapid rate it is interesting to note that the basis for the greater part of medical decision making is still medical imaging This may change as genomics and proteomics fulfil more of their potential but it is estimated that more than half of current hospital visits result in imaging studies In that respect it is true that the more things change the more they stay the same Alphonse Karr 1849 and that medical imaging is the cornerstone of the field This focus on medical imaging is evident throughout the CARS conference with sessions dedicated to Medical Imaging MI itself Image Processing and Display IPD Image Guided Radiological Therapy IGRT Image Guided Therapy IGT and separate symposia on Computer Aided Diagnosis based on imaging and both Cardiovascular and Maxillofacial Imaging Still it is up to you the engineers scientists clinicians and related personnel participating in CARS to ensure that innovation in technology and procedures is not developed just for the sake of change but instead to achieve progress and thereby provide better patient care

Medical Image Computing and Computer-Assisted Intervention - MICCAI 2008 Dimitris Metaxas, Leon Axel, Gabor Fichtinger, Gabor Szekely,2008-10-30 The 11th International Conference on Medical Imaging and Computer Assisted Intervention MICCAI 2008 was held at the Helen and Martin Kimmel Center of New York University New York City USA on

September 6-10 2008 MICCAI is the premier international conference in this domain with depth papers on the multidisciplinary fields of biomedical image computing and analysis, computer assisted intervention and medical robotics. The conference brings together biological scientists, clinicians, computer scientists, engineers, mathematicians, physicists and other interested researchers and offers them a forum to exchange ideas in these exciting and rapidly growing fields. The conference is both very selective and very attractive; this year we received a record number of 700 submissions from 34 countries and 6 continents from which 258 papers were selected for publication, which corresponds to a success rate of approximately 36%. Some interesting facts about the distribution of submitted and accepted papers are shown graphically at the end of this preface. The paper selection process this year was based on the following procedure which included the introduction of several novelties over previous years: 1. A Program Committee (PC) of 49 members was recruited by the Program Chairs to get the necessary body of expertise and geographical coverage. All PC members agreed in advance to participate in the final paper selection process. 2. Key words grouped in 7 categories were used to describe the content of the submissions and the expertise of the reviewers.
