Schamp,2012-12-06 This book is the product of four years of collaborative work within the framework of the European Science Foundation s Regional and Urban Restructuring in Europe RURE programme With one exception all of the chapters have been prepared by participants in RURE the exception being that commissioned from Conti and Enrietti on Fiat and Italy

to provide a fuller coverage of changes in the main automobile producing companies and countries of Europe. A perhaps the central theme around which the RURE programme was conceived is that the restructuring of the production system lies at the heart of the changing map of Europe. Equally it continues to be the case that the automobile industry lies at the cutting edge of the search for viable new models of production. Some eighty years ago the automobile industry occupied a pivotal position in the transition from craft to mass production; indeed Fordism came to denote not just a particular micro economic model of production organisation in the factory but a macro scale model of economic development characterized by a particular pattern of relations between mass production, mass consumption and national state regulation. From the late 1960s however it became increasingly clear that Fordism as a macro scale model of advanced capitalist development was reaching its limits.

Customer Retention in the Automotive Industry Michael D. Johnson, Andreas Herrmann, Frank Huber, Anders Gustafsson, 2012-12-06. The intensely competitive global automotive industry is in the midst of both a quality evolution and management transformation. In an evolutionary fashion industry attention has progressed from a focus on internal quality to external perceptions of customer satisfaction to subsequent customer retention and profitability. More transformational is the change in the way automotive companies operate and manage themselves. An industry once dominated at a product level by engineering and a management level by finance is becoming a cross functional customer oriented industry. Understanding the links from quality to satisfaction to retention has become a key to financial and organizational success as the automotive industry enters the new millennium. We are fortunate in this regard to have assembled a diverse group of both academic and automotive industry contributors to offer a variety of insights into these links. After describing the ongoing changes in the automotive industry in more detail, this introductory chapter describes a framework for linking quality, satisfaction and retention. The framework is used to introduce each of the individual chapters and highlight its contribution. Although our primary emphasis is on the automotive industry, the implications of the research and lessons learned extend far beyond. If anything, the automotive industry is a prototypical competitive global industry that faces a myriad of business issues. These include among others issues pertaining to product development, service development, process improvement, product quality, service quality, supplier relationships, internal customer satisfaction, external customer satisfaction, retailing, promotion, pricing, franchising and technology management.
