

# COMPOSTING for KIDS

*One of the most valuable lessons you can teach your child*

We eat fresh, yummy food.

We then produce food scraps...

...and throw them into a special bin

Compost helps to make healthy food grow, so we'll have more to eat!

The food scraps decompose and turn into super-healthy soil called COMPOST.

## **Soil And Composting For Children:**

**The Science of Composting** Eliot Epstein,2017-11-22 FROM THE PREFACE The main objective of composting is to transform organic materials into a stable usable product Often organic materials which may have limited beneficial use in their raw state or have regulatory disposal constraints can be transformed by composting into marketable products The limits on beneficial reuse may be regulations or they may be due to the potential for materials to be putrescible or pathogenic Composting can be a solution for each of these The implementation of composting on a large scale in contrast to home or backyard composting involves materials handling Technological implementation of composting must be consistent with the biological demand of the system If the biological system is violated conditions will not be optimized for composting and problems such as odor generation insufficient aeration or moisture or a combination of these conditions may result Past problems and closure of facilities have been largely due to violations of the biological systems Product quality with respect to particle size inclusions moisture content and other physical aspects are a function of engineering design A well designed system must have the biological and engineering principles in harmony at all times *Compost* Ben Raskin,2014-02-01
