Study Guide: Solar System

1. How did the solar system form? Describe the five major processes, the gas power spectrum, and any other important stages and information.

It started as a huge cloud of gas and dust (a nebula), which started to clump. Heat and gas started to build up, and most of the gas started to build up in the middle and toward the Sun. The rest of the gas started to build up in the outer regions. The first planets formed and started to pull the other material toward them.

Planets, moons, asteroids, comets, meteoroids, and other objects.
