Technologies for Prospecting, Extraction, and Utilization of Space Resources Paul Zabel, Philipp Reiss, Angel Abbud-Madrid, Beth Lomax, Florian Kehl, Valentin T. Bickel, Hendrik Kolvenbach, Philip Arm

,Gabriela Ligeza, 2024-11-18 Sustainable exploration of the solar system requires a large amount of material and propellant to be transported out of Earth s gravity well and onwards to their destination Despite recent advances in lowering launch costs transferring material from Earth to space is still very costly It still amounts to several thousand to tens of thousands of Euros per kilogram to low earth orbit and transportation to the Moon and Mars even a multiple of that There is an abundance of resources in our solar system that can be utilized to reduce the material required to be launched from Earth significantly Among these resources are water ice hydrates metals regolith rare earth elements chemical compounds volatiles and rare isotopes Utilizing these space resources would enable e g consumable and propellant production in space manufacturing or

the construction of large structures which would otherwise be very expensive or not possible at all with material launched from Earth Lunar regolith for example contains iron and titanium that could be used to produce spacecraft components or structural elements for a lunar base while oxygen released from oxide minerals could be used for respiration or as a propellant In addition water ice could be extracted from regolith and used for consumption or agricultural applications Although there have been numerous missions to the Moon there are still a lot of unknowns concerning its surface making it difficult to know where to look for resources and how to extract them

Foley, 2025-08-08 Billions of dollars Euros yen and yuan in public funds are spent annually to promote innovation in metropolitan regions attempting to transform the economy by attracting technology based companies and supporting small startups to secure high paying jobs The impacts of those investments are typically assessed in terms of economic growth venture capital and jobs Regional innovation is assessed with financial measures that do not account for the distribution of wealth nor do they evaluate if innovation addresses broader sustainability concerns This book draws on evidence from 144 interviews with civic leaders in three urban regions Atlanta Phoenix and the Twin Cities to illuminate three commonly accepted but flawed myths about innovation that misdirect policymakers and civic leaders and perpetuate the idea that innovation is solely about economic growth This book offers evidence of the social networks labor divisions and conditions enabling innovation to dispel those three myths and propose more nuanced and realistic ways of thinking about regional innovation This book is not an argument against innovation Rather it critically reflects upon investments in innovation and showcases laudable efforts to create a livable and sustainable city The book offers a novel method to assess the processes and outcomes of innovation in a manner that can complement economic approaches The author lays bare the human values that motivate city staff corporate officers and academic partners and highlights the efforts of organizations that often remain underappreciated The evidence presented in this book puts forward a means to assess if and how innovation contributes to an equitable and sustainable future or if it perpetuates injustices and economic stratification The Myths of Regional Innovation will appeal to scholars across broad fields including innovation studies technology management entrepreneurship economic development and public policy Medieval Spaces in Comics Elizabeth Allyn Woock, 2024-11-12 This book proposes a conceptual framework for analyzing and discussing narrative space in comics Building on Mieke Bal's phenomenological approach to cultural analysis 2002 Gaston Bachelard's Poetics of Space 1996 and Geraint D Arcy's use of the mise en scene to describe space in the comics format 2020 this book layers in a nuanced approach to the depiction of medieval environments through affect theory and poetics to interrogate the staging of ideas which are associated with the medieval period Considering the action setting and story as well as affect atmosphere and mood medieval space is contextualized as an ethically complex poetic image This book also explores the communicative possibilities of the comics format and seeks to show rather than just tell the methodologies of space in comics based research through illustrating key sections of the text **Advances in natural product chemistry: Yunnan university 100th anniversary** Wen Chen, Jian-Wei Dong, Ana Figueiras, Siva S.
