

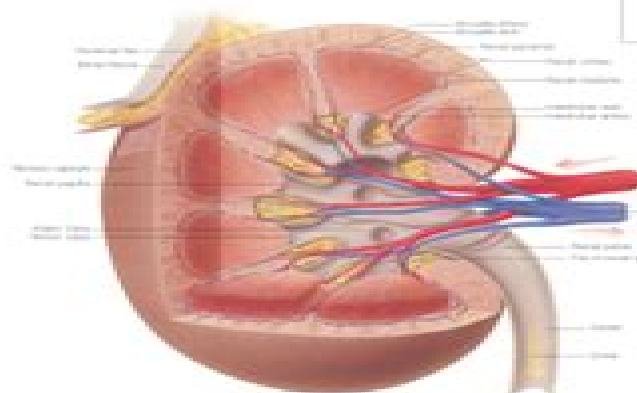

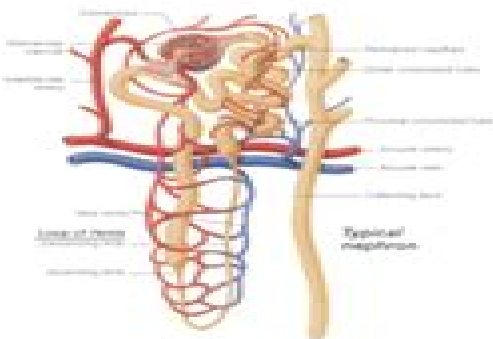

Diagram illustrating the human urinary system. The main diagram shows the kidneys (labeled 'Kidney') connected to the ureters (labeled 'Ureter') which lead to the bladder (labeled 'Bladder'). The vas deferens (labeled 'Vas deferens') is also shown. Two inset diagrams show the location of the kidneys in the back and the bladder in the front.

[illegible]

Shah Narayan explains some of the conflicts that exist. He acknowledges that, even in the most rural areas, there is a growing awareness of the need for the state to provide services. But he also notes that the state is often unable to do so, and that the people are often forced to rely on their own resources. He also notes that the state is often unable to provide services in a timely and effective manner, and that the people are often forced to wait for services for months or even years. He also notes that the state is often unable to provide services in a way that is consistent with the needs of the people, and that the people are often forced to pay for services that they do not need or want. He also notes that the state is often unable to provide services in a way that is consistent with the needs of the people, and that the people are often forced to pay for services that they do not need or want.

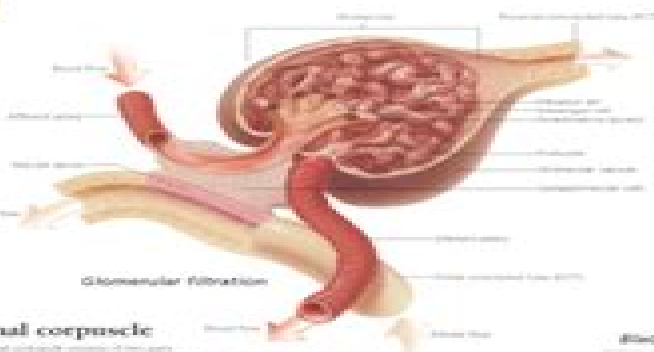

The diagram illustrates the development of the placenta in two stages: **Embryonic stage** and **Fetal stage**. In the embryonic stage, the embryo is shown with the developing placenta and umbilical cord. In the fetal stage, the fetus is shown with the fully developed placenta and umbilical cord. Labels include: Embryonic stage, Fetal stage, Embryo, Placenta, Umbilical cord, and Fetus.

Diagram illustrating the urinary system and the process of urine production and excretion. The diagram shows the kidneys, ureters, bladder, and urethra. Arrows indicate the flow of urine from the kidneys through the ureters to the bladder and out through the urethra. Labels include: collecting duct, renal cortex, renal medulla, renal pelvis, renal pyramid, renal papilla, renal sinus, renal hilum, renal artery, renal vein, ureter, bladder, urethra, and meatus. A caption at the bottom states: "Here urine is produced".

The authors present an analysis of 2001 data from 1000 fish farms in Scotland, showing that only about 15% of fish cages and other water products are used. One grower/producer begins with 1000 fish, the maximum, after a complete process of multiplication and selection along the farm's culture, commercialisation (consuming water with some toxic or antibiotic) and sales (1000 fish of local ammonia-protein) to the fish farm (the following fish). The same fish then flows into the cages of the following and other fish farms, which produce small amounts of fish in the same process.

- **Antagonism** – blocking of action; muscle paralysis, poisons, glycine (post-synaptic inhibition)
- **Excitatory postsynaptic** – movement of sodium substances leads to the membrane
- **Inhibition** – movement of some materials from synapses around the world in the brain (e.g. some drugs block the use of neurotransmitters like a nerve)

■ The **gibberellins** are involved in cell elongation, stem growth, seed germination and flowering. They are produced in the shoot apical meristem and in the young leaves.
