Hollander,2009-11-15 Over the last century the Everglades underwent a metaphorical and ecological transition from impenetrable swamp to endangered wetland At the heart of this transformation lies the Florida sugar industry which by the 1990s was at the center of the political storm over the multi billion dollar ecological restoration of the Everglades Raising Cane in the Glades is the first study to situate the environmental transformation of the Everglades within the economic and historical geography of global sugar production and trade Using among other sources interviews government and corporate documents and recently declassified U S State Department memoranda Gail M Hollander demonstrates that the development of Florida s sugar region was the outcome of pitched battles reaching the highest political offices in the U S and in countries around the world especially Cuba which emerges in her narrative as a model a competitor and the regional other to Florida s self Spanning the period from the age of empire to the era of globalization the book shows how the sugar question a label nineteenth century economists coined for intense international debates on sugar production and trade emerges repeatedly in new guises Hollander uses the sugar question as a thread to stitch together past and present local and global in explaining Everglades transformation [Natural Allies](#) Daniel Macfarlane,2023-08-15 No two nations have exchanged natural resources produced transborder environmental agreements or cooperatively altered ecosystems on the same scale as Canada and the United States Environmental and energy diplomacy have profoundly shaped both countries economies politics and landscapes for over 150 years Natural Allies looks at the history of US Canada relations through an environmental lens From fisheries in the late nineteenth century to oil pipelines in the twenty first century Daniel Macfarlane recounts the scores of transborder environmental and energy arrangements made between the two nations Many became global precedents that

influenced international environmental law governance and politics including the Boundary Waters Treaty the Trail Smelter case hydroelectric megaprojects and the Great Lakes Water Quality Agreements In addition to water fish wood minerals and myriad other resources Natural Allies details the history of the continental energy relationship from electricity to uranium to fossil fuels showing how Canada became vital to American strategic interests and along with the United States a major international energy power and petro state Environmental and energy relations facilitated the integration and prosperity of Canada and the United States but also made these countries responsible for the current climate crisis and other unsustainable forms of ecological degradation Looking to the future Natural Allies argues that the concept of national security must be widened to include natural security a commitment to public national and international safety from environmental harms especially those caused by human actions
