Architectural Framework for Web Development and Micro Distributed Applications Rodriguez, Guillermo, 2023-04-17 In recent years we have ushered in a new age where applications will become smaller distributed JavaScript laden microservices infused and utilize the hardware of the client to operate A new paradigm has been forced upon us by the large search providers and because of this we can now leverage them to help our applications obtain influence where our applications become the voice of authority on the internet and consequently help our organizations reap the benefits of mass adoption To better understand this we must first consider the history that has taken us to where we find ourselves Architectural Framework for Web Development and Micro Distributed Applications helps readers to come to an understanding of how the indexing domain may be leveraged by this new wave of JavaScript applications that have been termed micro distributed applications and by whose creation and implementation will allow the enterprise to reap the benefit of influence by the existing search systems that the masses utilize It helps to fill in the picture of the evolution that has occurred and will continue to occur in web development whereby the new breed of applications will become JavaScript laden and highly distributed and whereby the businesses that implement them will stand a chance to win the indexing race and consequently stand to win the attention of the masses Covering topics such as distributed systems search engine optimization and software as a service this premier reference source is a dynamic resource for web developers students and educators of higher education software developers technical personnel IT managers computer scientists librarians researchers and academicians

An Integrated Approach to Software Engineering Pankaj Jalote,2012-12-06 A lot has changed in the fast moving area of software engineering since the first edition of this book came out However two particularly dominant trends are clearly discernible focus on software processes and object orientation A lot more attention is now given to software processes because process improvement is considered one of the basic mechanisms for improving quality and productivity And the object oriented approach is considered by many one of the best hopes for solving some of the problems faced by software developers In this second edition these two trends are clearly highlighted Aseparate chapter has been included entitled Software Processes In addition to talking about the various development process models the chapter discusses other processes in soft ware development and other issues related to processes Object orientation figures in many chapters Object oriented analysis is discussed in the chapter on require ments while there is a complete chapter entitled Object Oriented Design Some aspects of object oriented programming are discussed in the chapter on coding while specific techniques for testing object oriented programs are discussed in the chapter on testing Overall if one wants to develop software using the paradigm of object orientation aB aspects of development that require different handling are discussed Most of the other chapters have also been enhanced in various ways In particular the chapters on requirements specification and testing have

been considerably enhanced **Multidisciplinary Research and Practice for Informations Systems** Gerald Quirchmayer,Josef Basl,Ilsun You,Lida Xu,Edgar Weippl,2012-08-14 This book constitutes the refereed proceedings of the IFIP WG 8.4.8.9 TC 5 International Cross Domain Conference and Workshop on Availability Reliability and Security CD ARES 2012 held in Prague Czech Republic in August 2012 The 50 revised papers presented were carefully reviewed and selected for inclusion in the volume The papers concentrate on the many aspects of information systems bridging the gap between research results in computer science and the many application fields They are organized in the following topical sections cross domain applications aspects of modeling and validation trust security privacy and safety mobile applications data processing and management retrieval and complex query processing e commerce and papers from the colocated International Workshop on Security and Cognitive Informatics for Homeland Defense SeCIHD 2012 **A Concise Introduction to Software Engineering** Pankaj Jalote,2008-10-17 An introductory course on Software Engineering remains one of the hardest subjects to teach largely because of the wide range of topics the area encompasses I have believed for some time that we often tend to teach too many concepts and topics in an introductory course resulting in shallow knowledge and little insight on application of these concepts And Software Engineering is really about application of concepts to efficiently engineer good software solutions Goals I believe that an introductory course on Software Engineering should focus on imparting to students the knowledge and skills that are needed to successfully execute a commercial project of a few person months effort while employing proper practices and techniques It is worth pointing out that a vast majority of the projects executed in the industry today fall in this scope executed by a small team over a few months I also believe that by carefully selecting the concepts and topics we can in the course of a semester achieve this This is the motivation of this book The goal of this book is to introduce to the students a limited number of concepts and practices which will achieve the following two objectives Teach the student the skills needed to execute a smallish commercial project Sentimental Analysis and Deep Learning Subarna Shakya,Valentina Emilia Balas,Sinchai Kamolphiwong,Ke-Lin Du,2021-10-25 This book gathers selected papers presented at the International Conference on Sentimental Analysis and Deep Learning ICSADL 2021 jointly organized by Tribhuvan University Nepal Prince of Songkla University Thailand and Ejesra during June 18-19 2021 The volume discusses state of the art research works on incorporating artificial intelligence models like deep learning techniques for intelligent sentiment analysis applications Emotions and sentiments are emerging as the most important human factors to understand the prominent user generated semantics and perceptions from the humongous volume of user generated data In this scenario sentiment analysis emerges as a significant breakthrough technology which can automatically analyze the human emotions in the data driven applications Sentiment analysis gains the ability to sense the existing voluminous unstructured data and delivers a real time analysis to efficiently automate the business processes Meanwhile deep learning emerges as the revolutionary paradigm with its extensive data driven representation learning architectures This book
