Senate. Committee on Environment and Public Works,2015 Athens and Boiotia Roy van Wijk,2024-01-25 Were Athenians and Boiotians natural enemies in the Archaic and Classical period The scholarly consensus is yes Roy van Wijk however re evaluates this commonly held assumption and shows that far from perpetually hostile their relationship was distinctive and complex Moving between diplomatic normative behaviour commemorative practice and the lived experience in the borderlands he offers a close analysis of literary sources combined with recent archaeological and epigraphic material to reveal an aspect to neighbourly relations that has hitherto escaped attention He argues that case studies such as the Mazi plain and Oropos show that territorial disputes were not a mainstay in diplomatic interactions and that commemorative practices in Panhellenic and local sanctuaries do not reflect an innate desire to castigate the neighbour The book breaks new ground by reconstructing a more positive and polyvalent appreciation of neighbourly relations based on the local lived experience This title is available as Open Access on Cambridge Core Bridging the Gap Suzanne McCray,Dana C. Ecology of Predation and Scavenging and the Interface Marcos Moleón, 2021-07-01 Predation and scavenging are pervasive ecological interactions in both terrestrial and aquatic environments The ecology evolution and conservation of predators and scavengers have received wide scientific attention and public awareness However the close connection that exists between predation and scavenging has not been emphasized until very recently The recognition that carnivorous animals may obtain meat by either hunting prey or scavenging their carcasses has profound implications from individual behavior to population community and ecosystem levels However many relevant questions still remain unexplored This book deals with some of these questions with the final aim to definitively dismiss the traditional view that predation and scavenging are disconnected ecological processes This compendium of science may help to inspire ecologists evolutionary biologists paleontologists anthropologists epidemiologists forensic scientists anatomists and of course conservation biologists in their stimulating and promising endeavor of achieving a more comprehensive understanding of carnivory in a rapidly changing world
