and it has been shown that they are responsible for initiating and modifying the features of this basic rhythm for stabilising the upright walking and for coordinating movements in a dynamic changing environment Furthermore specific damages into spinal and supraspinal structures result in specific alterations of human locomotion as evident in subjects with brain injuries such as stroke brain trauma or people with cerebral palsy in people with death of dopaminergic neurons in the substantia nigra due to Parkinson s disease or in subjects with cerebellar dysfunctions such as patients with ataxia The role of cerebellum during locomotion has been shown to be related to coordination and adaptation of movements Cerebellum is the structure of CNS where are conceivably located the internal models that are neural representations miming meaningful aspects of our body such as input output characteristics of sensorimotor system Internal model control has been shown to be at the basis of motor strategies for compensating delays or lacks in sensorimotor feedbacks and some aspects of locomotion need predictive internal control especially for improving gait dynamic stability for avoiding obstacles or when sensory feedback is altered or lacking Furthermore despite internal model concepts are widespread in neuroscience and neurocognitive science neurorehabilitation paid far too little attention to the potential role of internal model control on gait recovery Many important scientists have contributed to this Research Topic with original studies computational studies and review articles focused on neural circuits and internal models involved in the control of human locomotion aiming at understanding the role played in control of locomotion of different neural circuits located at brain cerebellum and spinal cord levels Geological Survey Water-supply Paper ,1987 Manual on Harmful Marine Microalgae Henrik O. Enevoldsen,Unesco,2003 This volume is a source book of protocols for studying monitoring and managing harmful marine microalgae Proliferation of microalgae in marine brackish or fresh waters can cause massive fish kills contaminate seafood with toxins and alter ecosystems in ways humans perceive as harmful About 300 species of microalgae are reported to form mass occurrences so called blooms and nearly one fourth of these species are known to produce toxins This manual covers the fields of harmful algal sampling identification culturing toxin analysis toxicology and management *Dr. Dobb's Journal* ,1984 **The Software Encyclopedia** ,1986
