Local Economic Development in the 21st Century Daphne T Greenwood, Richard P F Holt, 2014-12-18 Provides a comprehensive look at local economic development and public policy placing special emphasis on quality of life and sustainability It draws extensively on case studies and includes both mainstream and alternative perspectives in dealing with economic growth and development issues The contributions of economic theories and empirical research to the policy debates and the relationship of both to quality of life and sustainability are explored and clarified

Accelerating Transportation Project and Program Delivery Dennis Keck, 2010 NCHRP Report 662 describes how selected transportation agencies have reduced the time required to complete the project delivery process This process takes new or renewed transportation facilities and services from conception to completion ready for users Project delivery is a primary indicator of an agency's effectiveness Individual highway and other transportation projects are developed under programs intended to implement agency and legislative initiatives and other public policy The way programs are organized and managed can determine the speed and efficiency of project development Accelerating program functions can speed up project delivery This report describes the experiences of eight state departments of transportation DOTs that made improvements in their project delivery and the lessons to be learned from their experiences The information will be useful to DOT managers seeking to ensure that their agencies organization policies and program operations facilitate project delivery

A Methodology for Performance Measurement and Peer Comparison in the Public Transportation Industry Paul Ryus, 2010 TRB's Transit Cooperative Research Program TCRP Report 141 A Methodology for Performance Measurement and

Peer Comparison in the Public Transportation Industry explores the use of performance measurement and benchmarking as tools to help identify the strengths and weaknesses of a transit organization set goals or performance targets and identify best practices to improve performance Planning and Design for Sustainable Urban Mobility Un-Habitat,2013-10-30

Urban transport systems worldwide are faced by a multitude of challenges Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars with a limited number of cities improving public transport systems in a sustainable manner However a number of challenges faced by urban transport systems such as greenhouse gas emissions noise and air pollution and road traffic accidents do not necessarily get solved by the construction of new infrastructure Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap The purpose of transportation and mobility is to gain access to destinations activities services and goods Thus access is the ultimate objective of transportation As a result urban planning and design should focus on how to bring people and places together by creating cities that focus on accessibility rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods Urban form and the functionality of the city are therefore a major focus of this report which highlights the importance of integrated land use and transport planning This new report of the United Nations Human Settlements Programme UN Habitat the world's leading authority on urban issues provides some thought provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems The Global Report on Human Settlements is the most authoritative and up to date global assessment of human settlements conditions and trends Preceding issues of the report have addressed such topics as Cities in a Globalizing World The Challenge of Slums Financing Urban Shelter Enhancing Urban Safety and Security Planning Sustainable Cities and Cities and Climate Change **Synthesis of Freight Research in Urban Transportation Planning**

Genevieve Giuliano,2013 TRB's National Cooperative Freight Research Program NCFRP Report 23 Synthesis of Freight Research in Urban Transportation Planning explores policies and practices for managing freight activity in metropolitan areas The primary focus of the report is on last mile first mile strategies but it also addresses strategies affecting environmental issues and trading hubs or nodes The research used to develop the report looked beyond the United States mostly but not exclusively in Europe and the European BESTUFS Best Urban Freight Solutions program for potentially relevant policies and practices that could be used in the United States Publication info Economic and Environmental Cost of Traffic Congestion in India Vijayalakshmi S,Krishna Raj,2023-12-12 This book explores one of the most prevailing problems of the contemporary urban world i.e traffic congestion and its economic environmental and health implications Generally viewed as an urban menace the problem of traffic congestion has huge economic implications which are often overlooked by urban planners This book examines and quantifies the costs and adverse consequences and of traffic congestion which

include emissions loss of productive hours fuel wastage and the adverse effects on the health of commuters among others It provides a comprehensive and scientific understanding of the underlying problems of traffic gridlocks by analyzing empirical evidence from Bengaluru a city in South India It also offers solutions and highlights innovative measures that draw from both economic and engineering perspectives to counter and reduce the tangible and intangible costs of traffic congestion This book will be of interest to both academic and non academic readers of economics environmental economics and econometrics transport economics urban planning transport geography as well as planners and policy makers

Gridlock Randal O'Toole, 2010-01-18 America is the most mobile society in history but our transportation system is on the verge of collapse Traffic congestion is today five times greater than it was 25 years ago yet many transportation plans and projects are making it worse As Randal O Toole reveals in Gridlock the prime causes of our ailing system are a government transportation planning philosophy whose primary goal is to diminish auto use hence personal mobility in combination with federal budget incentives that perversely encourage transportation planners to increase congestion As a result the automobile which is accessible to almost every family in the nation and provides unparalleled access to better housing low cost consumer goods a choice driven affordable life and freedom is being deliberately forced off the transportation grid by the expensive solution of little used high speed trains and urban transit lines Gridlock presents a wide range of innovative ideas and policy recommendations for creating an effective transportation system improvements that will increase our mobility and pay for themselves whether it s cars buses planes or trains At the center of O Toole s solutions are three core principles those who use transportation facilities should pay for them negative effects should be dealt with in a cost efficient manner and new technologies that will increase mobility at a low cost must be embraced In Gridlock Randal O Toole brings energetic and unconventional thinking to transportation strategies that have until now only driven us into the breakdown lane

Transport, the Environment and Security Rae Zimmerman, 2012-01-01 This book is a tremendous information resource and Dr Zimmerman is a true data guru Informed by her unique combination of interests Transport the Environment and Security represents a giant leap forward in understanding this previously understudied confluence of forces encompassing topics as diverse as how transportation affects the environment and how security problems can affect transportation Vicki Bier University of Wisconsin Madison US Zimmerman s book is a much needed addition to our scientific

understanding of the nexus between environment and security within a transportation context Transportation networks rail and road are the quintessential American lifeline and disruptions through episodic natural hazards terrorist activities or longer term climate changes will have profound changes on society presently and in the future Zimmerman illustrates the synergies between environment transport networks security social justice and urban places in a masterful and thoughtful synthesis that underscores the interdependencies within the transportation infrastructure the nation's vulnerability to transport disruptions and offers ideas for increasing the resilience of the transportation infrastructure It will become a standard reference as we re imagine transport in the 21st century under changing climate security environment and living conditions Susan L Cutter University of South Carolina US Transportation planning and policy making have followed a particular model for more than fifty years Rae Zimmerman begins with the premise that we are in a rut and that the old ways of thinking need to be replaced An enormous amount of evidence is presented that together argues a strong case for the systematic integration of planning for transportation the environment and security While the book does not get us to an integrated process it points us to one and starts us down a creative path A great introduction to the complexities of these relationships Martin Wachs RAND Corporation US Effective means of transport are critical under both normal and extreme conditions but modern transport systems are subject to many diverse demands This path breaking book uniquely draws together the typically conflicting arenas of transport the environment and security and provides collective solutions to their respective issues and challenges From a primarily urban perspective the author illustrates that the fields of transportation environment with an emphasis on climate change and security for both natural hazards and terrorism and their interconnections remain robust areas for policy and planning Synthesizing existing data new analyses and a rich set of case studies the book uses transportation networks as a framework to explore transportation in conjunction with environment security and interdependencies with other infrastructure sectors The US rail transit system ecological corridors cyber security planning mechanisms and the effectiveness of technologies are among the topics explored in detail Case studies of severe and potential impacts of natural hazards accidents and security breaches on transportation are presented These cases support the analyses of the forces on transportation land use and patterns of population change that connect disconnect and reconnect people from their environment and security The book will prove a fascinating and insightful read for academics students and practitioners across a wide range of fields including transport environmental economics environmental management urban planning public policy and terrorism and security

Prime Movers of Globalization Vaclav Smil, 2013-02-08 The story of how diesel engines and gas turbines used to power cargo ships and jet airplanes made today's globally integrated economy possible The many books on globalization published over the past few years range from claims that the world is flat to an unlikely rehabilitation of Genghis Khan as a pioneer of global commerce Missing from these accounts is a consideration of the technologies behind the creation of the globalized economy What makes it possible for us

to move billions of tons of raw materials and manufactured goods from continent to continent Why are we able to fly almost anywhere on the planet within twenty four hours In *Prime Movers of Globalization* Vaclav Smil offers a history of two key technical developments that have driven globalization the high compression non sparking internal combustion engines invented by Rudolf Diesel in the 1890s and the gas turbines designed by Frank Whittle and Hans Joachim Pabst von Ohain in the 1930s The massive diesel engines that power cargo ships and the gas turbines that propel jet engines Smil argues are more important to the global economy than any corporate structure or international trade agreement Smil compares the efficiency and scale of these two technologies to prime movers of the past including the sail and the steam engine The lengthy processes of development commercialization and diffusion that the diesel engine and the gas turbine went through he argues provide perfect examples of gradual technical advances that receive little attention but have resulted in epochal shifts in global affairs and the global economy Two Prime Movers of Globalization Vaclav Smil,2010 The story of how diesel engines and gas turbines used to power cargo ships and jet airplanes made today s globally integrated economy possible *Municipal Benchmarks* David N. Ammons,2012-03-06 Completely updated with new listings and statistics throughout this comprehensive resource goes beyond the current literature on local government performance measurement and provides benchmarks on more than 40 key topics against which performance can be assessed in all areas of operation Ammons has assembled a remarkable volume of benchmark data for a comprehensive range of municipal government services Municipal Benchmarks will be of considerable help for municipalities in laying the groundwork for an accountable government Harry Hatry The Urban Institute I am delighted to see that ideas for advancing our industry are alive and thriving Ammons s collection does an incredible service to every municipal manager in the country and perhaps the world These benchmarks clearly set standardized ways of looking at measuring the performance of municipal service delivery Ted Gaebler City Manager Rancho Cordoba CA co author of *Reinventing Government*
