Andrés Díez Herrero, Luis Laín Huerta, Miguel Llorente Isidro, 2009 **Renewing Our Rivers** Mark K. Briggs, Waite R. Osterkamp, 2021-01-05 Our rivers are in crisis and the need for river restoration has never been more urgent. Water security and biodiversity indices for all of the world's major rivers have declined due to pollution diversions impoundments fragmented flows introduced and invasive species and many other abuses. Developing successful restoration responses are essential. *Renewing Our Rivers* addresses this need head on with examples of how to design and implement stream corridor restoration projects. Based on the experiences of seasoned professionals *Renewing Our Rivers* provides stream restoration practitioners the main steps to develop successful and viable stream restoration projects that last. Ecologists geomorphologists and hydrologists from dryland regions of Australia Mexico and the United States share case studies and key lessons learned for successful restoration and renewal of our most vital resource. The aim of this guidebook is to offer essential restoration guidance that allows a start to finish overview of what it takes to bring back a damaged stream.

corridor Chapters cover planning such emerging themes as climate change and environmental flow the nuances of implementing restoration tactics and monitoring restoration results Renewing Our Rivers provides community members educators students natural resource practitioners experts and scientists broader perspectives on how to move the science of restoration to practical success Handbook of Climate Change Impacts on River Basin Management Saeid Eslamian, Mir Bintul Huda, Nasir Ahmad Rather, Faezeh A. Eslamian, 2024-08-29 Climate change not only involves rising temperatures but it can also alter the hydro meteorological parameters of a region and the corresponding changes emerging in the various biotic or abiotic environmental features One of the results of climate change has been the impact on the sediment yield and its transport These changes have implications for various other environmental components particularly soils water bodies water quality land productivity sedimentation processes glacier dynamics and risk management strategies to name a few This volume provides an examination of the technological approaches to water management and the practical applications for remote sensing satellite image processing and advanced statistical methods all which can be utilized to predict monitor and manage the effects of climate change on river basins Environmental and Hydrological Systems Modelling A W Jayawardena, 2014-01-21 Mathematical modelling has become an indispensable tool for engineers scientists planners decision makers and many other professionals to make predictions of future scenarios as well as real impending events As the modelling approach and the model to be used are problem specific no single model or approach can be used to solve all problems and there are constraints in each situation Modellers therefore need to have a choice when confronted with constraints such as lack of sufficient data resources expertise and time Environmental and Hydrological Systems Modelling provides the tools needed by presenting different approaches to modelling the water environment over a range of spatial and temporal scales Their applications are shown with a series of case studies taken mainly from the Asia Pacific Region Coverage includes Population dynamics Reaction kinetics Water quality systems Longitudinal dispersion Time series analysis and forecasting Artificial neural networks Fractals and chaos Dynamical systems Support vector machines Fuzzy logic systems Genetic algorithms and genetic programming This book will be of great value to advanced students professionals academics and researchers working in the water environment Hydrologic Modeling Vijay P Singh, Shalini Yadav, Ram Narayan Yadava, 2018-01-19 This book contains seven parts The first part deals with some aspects of rainfall analysis including rainfall probability distribution local rainfall interception and analysis for reservoir release Part 2 is on evapotranspiration and discusses development of neural network models errors and sensitivity Part 3 focuses on various aspects of urban runoff including hydrologic impacts storm water management and drainage systems Part 4 deals with soil erosion and sediment covering mineralogical composition geostatistical analysis land use impacts and land use mapping Part 5 treats remote sensing and geographic information system GIS applications to different hydrologic problems Watershed runoff and floods are discussed in Part 6 encompassing hydraulic experimental and theoretical aspects Water modeling
