Tangent Theorem: The tangent line (or segment, or ray) is perpendicular to the radius of the circle at the point of tangency.

This theorem can be used to solve right triangle problems with circles.

Secant Theorem 1: If two chords intersect inside a circle, the products of the measures of the segments of the chords are equal.

$$TX \cdot XV = UX \cdot XW$$

$$TX = 5$$

$$XV = 8$$

$$UX = 10$$

$$XW = \underline{\hspace{2cm}}$$

Secant Theorem 2: If two secant segments are drawn to a circle from an exterior point outside the circle, the product of the measures of one secant segment and its external secant segment is equal to the product of the measures of the other secant segment and its external secant segment.

$$DF \cdot DE = DG \cdot DH$$

$$DH = 8$$

$$DE = 6$$

$$DG = 18$$

$$DF = \underline{\hspace{2cm}}$$

Harris,1996 A Programmed Review Of Engineering Fundamentals Baldwin,Hess,2013-04-17 Engineering registration is accelerating at a pace unequalled since institution of registration laws in the 1920s and 1930s This phenomenon is not due to an easing of entrance requirements since only vestiges of grandfathering and eminence exist in most states Nor is it due to a lessening in the difficulty of the registration examinations In fact it is generally agreed that the Engineering Fundamentals Examination has significantly increased in difficulty over the last fifteen years Why then the increased interest in registration among practicing engineers Historically the professional engineer has been in private practice offering consulting services directly to the public Registration laws were passed to protect the public from incompetent untrained practitioners in any engineering area However the registration laws go beyond establishing an individual's credentials One reason for the new interest in engineering registration is the proliferation of new activity areas such as pollution control and energy conservation where the public is keenly aware of and insistent upon quality technological inputs Precalculus: A Functional Approach to Graphing and Problem Solving Karl Smith,2013 Precalculus A Functional Approach to Graphing and Problem Solving prepares students for the concepts and applications they will encounter in future calculus courses In far too many texts process is stressed over insight and understanding and students move on to calculus ill equipped to think conceptually about its essential ideas This text provides sound development of the important mathematical underpinnings of calculus stimulating problems and exercises and a well developed engaging pedagogy Students will leave with a clear understanding of what lies ahead in their future calculus courses Instructors will find that Smith's straightforward student friendly presentation provides exactly what they have been looking for in a text **Precalculus** Karl J. Bikner-Ahsbahr, Susanne Prediger, 2014-08-25 How can we deal with the diversity of theories in mathematics education This was the main question that led the authors of this book to found the Networking Theories Group Starting from the shared assumption that the existence of different theories is a resource for mathematics education research the authors have explored the possibilities of interactions between theories such as contrasting coordinating and locally integrating them The book explains and illustrates what it means to network theories it presents networking as a challenging but fruitful research practice and shows how the Group dealt with this challenge considering five theoretical approaches namely the approach of Action Production and Communication APC the Theory of Didactical Situations TDS the Anthropological Theory of the Didactic ATD the approach of Abstraction in Context AiC and the Theory of Interest Dense Situations IDS A synthetic presentation of each theory and their connections shows how the activity of networking generates questions at the theoretical methodological and practical levels and how the work on these questions leads to both theoretical and practical progress The core of the book consists of four new networking case studies which illustrate what exactly can be gained by this approach and what kind of difficulties might arise
