Information Hiding Kaushal Solanki, Kenneth

Sullivan, Upamanyu Madhoo, 2008-10-23 It is our great pleasure to present this volume of the proceedings of the 10th edition of Information Hiding IH 2008. The conference was held in Santa Barbara, the American Riviera, California, USA, during May 19-21, 2008. It was organized by three Santa Barbarans, one from both industry (Mayachitra) and academia (UCSB). Over the years, Information Hiding IH has established itself as a premier forum for presenting research covering various aspects of information hiding. Continuing the tradition, this year we provide a balanced program including topics such as anonymity and privacy, forensics, steganography, watermarking, fingerprinting, other hiding domains, and novel applications. We received a total of 64 papers from all over the globe and would like to take this opportunity to thank all the authors who submitted their paper to IH 2008 and thus contributed to the consolidation of the reputation of the conference. The papers were refereed by at least three reviewers who provided detailed comments, which was followed by discussion amongst the Program Committee members. Only 25 papers were selected for presentation. This rigorous review process will certainly strengthen Information Hiding's position as the top forum of our community.

Embedded Cryptographic Hardware Nadia Nedjah, Luiza de Macedo Mourelle, 2005 Data security is an important requirement for almost all, if not all, information-oriented applications such as e-commerce, digital signature, secure Internet, etc. All these services use encrypted data. Cryptography is a milliner science that was the key to the secret of ancient Rome and a fundamental piece in the Second World War. Today it is a star in the computation world. Several operating systems, database systems, or simple filing systems provide the user with cryptographic functions that allow controlled data scrambling. Modern cryptology, which is the basis of information security techniques, started in the late 1970s and developed in the 1980s. As communication networks were spreading deep into society, the need for secure communication greatly promoted cryptographic research. The need for fast but secure cryptographic systems is growing bigger. Therefore, dedicated hardware for cryptography is becoming a key issue for designers. With the spread of reconfigurable hardware such as FPGAs, hardware implementations of cryptographic algorithms became cost-effective. The focus of this book is on all aspects of cryptographic hardware and embedded systems. This includes design, implementation, and security of such systems. The content of this book is divided into four main parts, each of which is organized in three chapters, with the exception of the last one.

Advances in Information and Computer Security Atsuo Inomata, Kan Yasuda, 2018-08-08 This book constitutes the refereed proceedings of the 13th International Workshop on Security IWSEC 2018 held in Sendai, Japan, in September 2018.

The 18 regular papers and 2 short papers presented in this volume were carefully reviewed and selected from 64 submissions. They were organized in topical sections named Cryptanalysis Implementation Security Public Key Primitives Security in Practice Secret Sharing Symmetric Key Primitives and Provable Security

Mastering Algorithms with Perl Jarkko Hietaniemi, John Macdonald, Jon Orwant, 1999-08-18 Many programmers would love to use Perl for projects that involve heavy lifting but miss the many traditional algorithms that textbooks teach for other languages. Computer scientists have identified many techniques that a wide range of programs need, such as Fuzzy pattern matching for text identification, misspellings, finding correlations in data, game playing algorithms, predicting phenomena such as Web traffic, polynomial and spline fitting. Using algorithms explained in this book, you too can carry out traditional programming tasks in a high-powered, efficient, easy-to-maintain manner with Perl. This book assumes a basic understanding of Perl syntax and functions but not necessarily any background in computer science. The authors explain in a readable fashion the reasons for using various classic programming techniques, the kind of applications that use them, and most important, how to code these algorithms in Perl. If you are an amateur programmer, this book will fill you in on the essential algorithms you need to solve problems like an expert. If you have already learned algorithms in other languages, you will be surprised at how much different and often easier it is to implement them in Perl. And yes, the book even has the obligatory fractal display program. There have been dozens of books on programming algorithms; some of them excellent, but never before has there been one that uses Perl. The authors include the editor of *The Perl Journal* and master librarian of CPAN; all are contributors to CPAN and have archived much of the code in this book. This book was so exciting I lost sleep reading it. Tom Christiansen

Cryptology and Network Security Swee-Huay Heng, Rebecca N. Wright, Bok-Min Goi, 2010-11-30 The 9th International Conference on Cryptology and Network Security (CANS 2010) was held in Kuala Lumpur, Malaysia, during December 12-14, 2010. The conference was co-organized by the Multimedia University (MMU) Malaysia and Universiti Tunku Abdul Rahman (UTAR) Malaysia. The conference received 64 submissions from 22 countries, out of which 21 were accepted after a careful and thorough review process. These proceedings also contain abstracts for two invited talks. All submissions were reviewed by at least three members of the Program Committee; those authored or co-authored by Program Committee members were reviewed by at least five reviewers. Program Committee members were allowed to use external reviewers to assist with their

reviews but remained responsible for the contents of the review and representing papers during the discussion and decision making. The review phase was followed by a 10 day discussion phase in which each paper with at least one supporting review was discussed. Additional experts were consulted where needed and final decisions were made. We thank the Program Committee for their hard work in selecting the program. We also thank the external reviewers who assisted with reviewing and the CANS Steering Committee for their help. We thank Shai Halevi for use of his Web Submission and Review software that was used for the electronic submission and review of the submitted papers and we thank the International Association for Cryptologic Research (IACR) for Web hosting of the software.

López-Permouth, 2006 This volume consists of contributions by speakers at a Conference on Algebra and its Applications that took place in Athens, Ohio, in March of 2005. It provides a snapshot of the diversity of themes and applications that interest algebraists today. The papers in this volume include some of the latest results in the theory of modules, noncommutative rings, representation theory, matrix theory, linear algebra over noncommutative rings, cryptography, error correcting codes over finite rings, and projective geometry codes, as well as expository articles that will provide algebraists and other mathematicians, including graduate students, with an accessible introduction to areas outside their own expertise. The book will serve both the specialist looking for the latest result and the novice seeking an accessible reference for some of the ideas and results presented here.
