11.1 Describing Chemical Reactions

Essential Understanding Chemical reactions are represented by balanced chemical equations.

Lesson Summary

Introduction to Chemical Equations A chemical equation uses symbols, and sometimes words, to show the reactants and products of a chemical reaction.

- ▶ A skeleton equation uses chemical formulas to represent reactants and products, but it does not indicate the relative amounts of each.
- ▶ Anything that enters into a reaction, such as heat or a catalyst, but is not a reactant or product is shown above or below the yields arrow in the equation.

Balancing Chemical Equations Chemical equations are balanced to show that mass is conserved during chemical reactions.

- ▶ A balanced equation shows the relative amounts of reactants and products, and it contains equal numbers of each type of atom on both sides of the equation.
- ▶ Chemical equations are balanced by using coefficients in front of the chemical formulas for the reactants and the products in a skeleton equation.

BUILD Math Skills

Balancing Equations All chemical equations must be balanced because of the law of conservation of mass, which states that matter cannot be created or destroyed. So, the number of atoms that you start with at the beginning of the reaction must equal the number of atoms that you end up with.

For example, the reaction $2\text{Mg} + \text{O}_2 \rightarrow 2\text{MgO}$ follows the law of conservation of mass because you start with 2 magnesium atoms and 2 oxygen atoms and you end up with 2 magnesium atoms and 2 oxygen atoms. You can think of the \rightarrow as an = sign.

Chaos Theory Kais A. M. Al Naimee, 2018-03-28 With a good background in nonlinear dynamics chaos theory and applications the author of this leading book gives a systematic treatment of the basic principle of nonlinear dynamics in different fields The contributions from leading international scientists active in the field provide a comprehensive overview of our current level of background on chaos theory and applications in different sciences In addition they show overlap with the traditional field of control theory in scientific community

Principles of Modern Chemistry David W. Oxtoby, Norman H. Nachtrieb, 1990 PRINCIPLES OF MODERN CHEMISTRY has dominated the honors and high mainstream general chemistry courses and is considered the standard for the course The fifth edition is a substantial revision that maintains the rigor of previous editions but reflects the exciting modern developments taking place in chemistry today Authors David W Oxtoby and H P Gillis provide a unique approach to learning chemical principles that emphasizes the total scientific process from observation to application placing general chemistry into a complete perspective for serious minded science and engineering students Chemical principles are illustrated by the use of modern materials comparable to equipment found in the scientific industry Students are therefore exposed to chemistry and its applications beyond the classroom This text is perfect for those instructors who are looking for a more advanced general chemistry textbook

The Sciences James Trefil, Robert M. Hazen, 2022-12-20 The Sciences An Integrated Approach 9th Edition by James Trefil and Robert Hazen recognizes that science forms a seamless web of knowledge about the universe This text fully integrates physics chemistry astronomy Earth sciences and biology and emphasizes general principles and their application to real world situations The goal of the text is to help students achieve scientific literacy Applauded by students and instructors for its easy to read style and detail appropriate for non science majors the ninth edition has been updated to bring the most up to date coverage to the students in all areas of science with increased emphasis on climate change sustainability viruses and public health and an extensively updated chapter on the importance of bioengineering

FEATURES INCLUDE The Science of Life To help show the interdisciplinary nature of the many concepts introduced in the text sections on living things are included in most chapters The chapters that emphasize principles specifically related to life are at the end of the book but the biological examples appear throughout The Ongoing Process of Science Science is a never ending process of asking questions and seeking answers In these features some of the most exciting questions currently being addressed by scientists are examined Mathematical Equations and Worked Examples Whenever an equation is introduced it is presented in three steps first as a sentence second as a word equation and finally in its traditional symbolic form In this way students can focus on the meaning rather than the abstraction of the mathematics An appendix on English and SI units is also included Science by the Numbers To help students understand the importance of

simple mathematical calculations in areas of magnitude several nontraditional calculations have been incorporated For example how much solid waste is generated in the United States how long it would take to erode a mountain and how many people were required to build Stonehenge Great Ideas and Great Ideas Concept Each chapter begins with a statement of a great unifying idea or theme in science and a concept map so that students immediately grasp the chief concept of the chapter and how the idea relates to the different branches of science These statements are intended to provide a framework for placing everyday experiences into a broad context Stop and Think Questions challenge students to think critically about the implications of a scientific discovery or principle Resources for Instructors and Students including practice quizzes flashcards lecture slides an instructor s manual images and tables from the book a test bank and much more **Science examination papers [afterw.] Science examinations [afterw.] Examination in science and technology** Education Ministry of,1899 *Basic Concepts of Chemistry* Leo J.
