Numerical Modeling in the Earth and Planetary Sciences Christian Huber, 2025-07-17 This textbook provides an introduction to the world of numerical modeling in the physical sciences focusing more specifically on earth and planetary sciences It is designed to lead the reader through the process of defining the mathematical or physical model of interest and applying numerical methods to approximate and explore the solutions to these models while also providing a quantitative assessment of the limitations performance and quality of these approximations The book is designed to provide a self contained reference by including the mathematical foundations required to understand the models and their convergence It includes a detailed discussion of models for ordinary systems of equation and partial differential equations with pseudo codes detailing the solution procedure Examples are drawn from the fields of earth and planetary sciences including geochemical box models non linear ordinary differential equations describing the evolution of subvolcanic magma chambers the mass conservation of cosmogenic nuclides in soils diffusion in minerals the hillslope equation the advection diffusion and wave equations and the shallow water equations Featuring numerous examples drawn from earth and planetary sciences the content of this book has been used by the author to teach numerical methods classes at the undergraduate and graduate levels over several years and will provide an excellent resources for teachers and learners in this area **A**

Problem-Solving Approach to Aquatic Chemistry James N. Jensen, 2023-01-05 A Problem Solving Approach to Aquatic Chemistry Enables civil and environmental engineers to understand the theory and application of aquatic equilibrium chemistry The second edition of A Problem Solving Approach to Aquatic Chemistry provides a detailed introduction to aquatic equilibrium chemistry calculation methods for systems at equilibrium applications of aquatic chemistry and chemical kinetics The text directly addresses two required ABET program outcomes in environmental engineering chemistry including stoichiometry equilibrium and kinetics and material and energy balances fate and transport of substances in and between air water and soil phases The book is very student centered with each chapter beginning with an introduction and ending with a summary that reviews the chapter s main points To aid in reader comprehension important terms are defined in context and key ideas are summarized Many thought provoking discussion questions worked examples and end of chapter problems are also included Each part of the text begins with a case study a portion of which is addressed in each subsequent chapter illustrating the principles of that chapter In addition each chapter has an Historical Note exploring connections with the people and cultures connected to topics in the text A Problem Solving Approach to Aquatic Chemistry includes Fundamental

concepts such as concentration units thermodynamic basis of equilibrium and manipulating equilibria Solutions of chemical equilibrium problems including setting up the problems and algebraic graphical and computer solution techniques Acid base equilibria including the concepts of acids and bases titrations and alkalinity and acidity Complexation including metals ligands equilibrium calculations with complexes and applications of complexation chemistry Oxidation reduction equilibria including equilibrium calculations graphical approaches and applications Gas liquid and solid liquid equilibrium with expanded coverage of the effects of global climate change Other topics including chemical kinetics of aquatic systems surface chemistry and integrative case studies For advanced senior undergraduates and first year graduate students in environmental engineering courses A Problem Solving Approach to Aquatic Chemistry serves as an invaluable learning resource on the topic with a variety of helpful learning elements included throughout to ensure information retention and the ability to apply covered concepts in practical settings
