**Earthquake-resistant Design Of Masonry Buildings** Miha Tomazevic, 1999-07-05 In the last few decades a considerable amount of experimental and analytical research on the seismic behaviour of masonry walls and buildings has been carried out The investigations resulted in the development of methods for seismic analysis and design as well as new technologies and construction systems After many centuries of traditional use and decades of allowable stress design clear concepts for limit state verification of masonry buildings under earthquake loading have recently been introduced in codes of practice Although this book is not a review of the state of the art of masonry structures in earthquake zones an attempt has been made to balance the discussion on recent code requirements state of the art methods of earthquake resistant design and the author's research work in order to render the book useful for a broader application in design practice An attempt has also been made to present in a condensed but easy to understand way all the information needed for earthquake resistant design of masonry buildings constructed using traditional systems The basic concepts of limit state verification are presented and equations for seismic resistance verification of masonry walls of all types of construction unreinforced confined and reinforced as well as masonry infilled reinforced concrete frames are addressed A method for seismic resistance verification compatible with recent code requirements is also discussed In all cases experimental results are used to explain the proposed methods and equations An important part of this book is dedicated to the discussion of the problems of repair retrofit and rehabilitation of existing masonry buildings including historical structures in urban centres Methods of strengthening masonry walls as well as improving the structural integrity of existing buildings are described in detail Wherever possible experimental evidence regarding the effectiveness of the proposed strengthening methods is given

*Seismic Performance of Concrete Buildings* Liviu Crainic,Mihai Munteanu,2012-12-10 This book examines and presents essential aspects of the behavior analysis design and detailing of reinforced concrete buildings subjected to strong seismic activity Seismic design is an extremely complex problem that has seen spectacular development in the last decades The present volume tries to show how the principles and methods of earthquake engineering can be applied to seismic analysis and design of reinforced concrete buildings The book starts with an up to date presentation of fundamental aspects of reinforced concrete behavior quantified through constitutive laws for monotonic and hysteretic loading Basic concepts of post elastic analysis like plastic hinge plastic length fiber models and stable and unstable hysteretic behaviour are accordingly defined and commented upon For a deeper understanding of seismic design philosophy and of static and dynamic post elastic analysis seismic behavior of different types of reinforced concrete structures frames walls is examined in detail Next up to date methods for analysis and design are presented The powerful concept of structural system is defined and

systematically used to explain the response to seismic activity as well as the procedures for analysis and detailing of common building structures Several case studies are presented The book is not code oriented The structural design codes are subject to constant reevaluation and updating Rather than presenting code provisions this book offers a coherent system of notions concepts and methods which facilitate understanding and application of any design code The content of this book is based mainly on the authors personal experience which is a combination of their teaching and research activity as well as their work in the private sector as structural designers The work will serve to help students and researchers as well as structural designers to better understand the fundamental aspects of behavior and analysis of reinforced concrete structures and accordingly to gain knowledge that will ensure a sound design of buildings
