

1. Hydrogen gas and Iron chloride are produced.

Explanation: The Chlorine from Hydrogen chloride is displaced by the Iron fillings to undergo the following reaction.

4. What is a balanced chemical equation? Why should a chemical equation be balanced?

Solution:

A balanced equation is the one in which number of different atoms on both the reactant and product sides are equal. Balancing chemical equations is necessary for the reaction should obey The Law of Conservation of mass. Balancing the chemical equation has no defined method and is purely a trial-and-error attempt.

5. Translate the following statements into chemical equations and balance them.

- (a) Hydrogen gas combines with nitrogen to form ammonia.
(b) Hydrogen sulphide gas burns in the air to give water and sulphur dioxide.
(c) Barium chloride reacts with aluminium sulphate to give Aluminium chloride and a precipitate of barium sulphate.
(d) Potassium metal reacts with water to give potassium hydroxide and Hydrogen gas.

Solution:

6. Balance the following chemical equations.

The Basics of Chemical Reactions Krista West,2013-12-15 The chemical reactions that shape the world are sometimes simple and sometimes complex which is at the very core of this informative text This volume explores the simplicity of basic chemical reactions and then builds to the more complex giving readers a history of the years and the minds that contributed to the research that led to chemistry as we know it today Biographical sidebars provide unique information about scientists who are valued in the field but are often not widely known

Multiple Representations in Chemical Education John K. Gilbert,David Treagust,2009-02-28 Chemistry seeks to provide qualitative and quantitative explanations for the observed behaviour of elements and their compounds Doing so involves making use of three types of representation the macro the empirical properties of substances the sub micro the natures of the entities giving rise to those properties and the symbolic the number of entities involved in any changes that take place Although understanding this triplet relationship is a key aspect of chemical education there is considerable evidence that students find great difficulty in achieving mastery of the ideas involved In bringing together the work of leading chemistry educators who are researching the triplet relationship at the secondary and university levels the book discusses the learning involved the problems that students encounter and successful approaches to teaching Based on the reported research the editors argue for a coherent model for understanding the triplet relationship in chemical education

Kinetics of Chemical Reactions Guy B. Marin,Gregory S. Yablonsky,2011-08-29 This systematic presentation covers both experimental and theoretical kinetic methods as well as fundamental and applied The identification of dominant reaction paths reaction intermediates and rate determining steps allows a quantification of the effects of reaction conditions and catalyst properties providing guidelines for catalyst optimization In addition the form in which the equations are presented allows for their straightforward implementation for scale up and chemical reactor design purposes Throughout the methodologies given are illustrated by many examples
