

## 8.2 Structure of DNA

KEY CONCEPT DNA structure is the code of all organisms.

### DNA is composed of four types of nucleotides.

Since the 1920s scientists have known the chemical parts of the DNA molecule. DNA is a very long polymer, or chain of repeating units. The units, or monomers, that make up DNA are called **nucleotides** (NOC-lee-oh-ri-tye). Each nucleotide has three parts: a phosphate group, a base, and a sugar.

There are four different types of DNA nucleotides: cytosine (C), thymine (T), adenine (A), and guanine (G). All of the nucleotides contain a phosphate group and a deoxyribose sugar. They differ in their nitrogen-containing bases, as shown in the table below.

Notice that thymine (T) and cytosine (C) have nitrogen-containing bases with a single-ring structure. Adenine (A) and guanine (G) are bases with a double-ring structure. A single molecule of human DNA is made of billions of nucleotides.

#### NUCLEOTIDE

The small units, or monomers, that make up a strand of DNA are called nucleotides. Nucleotides have three parts.

- phosphate group: one phosphate with four oxygens
- deoxyribose: ring shape
- nitrogen-containing base: a single or double ring built around nitrogen atoms and carbon atoms

#### THE FOUR NITROGEN-CONTAINING BASES OF DNA

##### Pyrimidines – Single Ring

Name of Base	Structural Formula	Model
Thymine		
Cytosine		

##### Purines – Double Ring

Name of Base	Structural Formula	Model
Adenine		
Guanine		

Circle the names of the four nucleotides shown in the table above.

#### BASE PAIRING RULES

The base pairing rules describe how nucleotides form pairs in DNA. T always pairs with A, and C always pairs with G.

The phosphate group represents the phosphate group and deoxyribose sugar molecules that make up DNA's "backbone."

The nitrogen-containing bases bond in the middle to form the rungs of the DNA ladder.

What sequence of bases would pair with GATCG?

#### Mark It Up

Go back and highlight each sentence that has a vocabulary word in bold.

Label the drawing at the right with the terms nucleotide, base pairing rules, and double helix. Write each term and draw a line that connects the term to the appropriate part of the drawing.
