Time and Behaviour C.M. Bradshaw, E. Szabadi, 1997-06-18 That time is both a dimension of behaviour and a ubiquitous controlling variable in the lives of all living things has been well recognized for many years The last decade has seen a burgeoning of interest in the quantitative analysis of timing behaviour and progress during the last five or six years has been particularly impressive with the publication of several major new theoretical contributions There has also been considerable progress in behavioural methodology during the past decade In the area of reinforcement schedules for example the venerable interresponse time schedule fixed interval peak procedure and interval bisection task have been complemented by a second generation of incisive instruments for analyzing timing behaviour Another area of recent development is the

analysis of the neurobiological substrate of timing behaviour Several research groups are currently studying the involvement of various central neurotransmitter systems in the timing behaviour and the ability of centrally acting drugs and discrete brain lesions to alter timing processes Yet another recent development in timing research is the growing dialogue between two fields that have grown up separately although superficially at least they seem to have much in common the experimental analysis of interval timing traditionally the province of experimental psychology and behavioural chronobiology The last few years have seen a growing interest in the comparative properties of the internal clocks that regulate biobehavioural rhythms with time bases in the circadian range or longer and those that are entailed in timing of intervals in the range of seconds or minutes All these areas of research and others are represented in the chapters that make up this volume This book will help to promote further interactions among researchers who hail from disparate disciplines but who share a common interest in the temporal properties of behaviour

Basic Principles of Cable Supported Bridges DR. B C ROY, 2024-05-15 This book presents a brief design approach for cable supported bridges based on experiences from past projects both domestic and international that were shared by experts in bridge engineering The specifications outlined in the book are adopted in the design of several cable stayed and extradosed bridges in India and abroad These specifications are in conformance with the global best practices In addition reference literature has been consulted during the compilation of various sections of the book In this endeavor the author sought suggestions and collective guidance from some eminent specialists in cable supported bridges from the USA Europe and Asia in order to provide a glimpse of practices across the globe In this book the author has attempted to highlight the basic principles of cable supported bridges and the same should be used only as a guideline for design It is believed that the reader would have acquired sufficient knowledge of analysis and design of complex bridges before going through this book Lastly brief case studies of two notable Indian bridges the Second Vivekananda Extradosed Nivedita Bridge and Burdwan Cable Stayed Bridge are provided While the former is an example of extradosed structure for Hooghly River crossing the latter is a three pylon first time in India cable stayed bridge over railway tracks These examples will elucidate the purpose of this book and make it useful to young practicing bridge engineers
