The air is first passed over cooling coils to remove all of the moisture necessary to achieve the final moisture content and then is passed over heating coils to achieve the final state.

- (a) Sketch the psychometric diagram for the process.
- (b) Determine the dew point temperature of the mixture at the inlet of the cooling coils and at the inlet of the heating coils.
- (c) What is the net heat transfer for the entire process for this process, in kJ/kg dry air?
