The Electromagnetic Origin of Quantum Theory and Light Dale Mills Grimes, Craig A. Grimes, 2005 This book resolves fundamental questions of quantum theory and offers arguably the strongest evidence yet in support of string theory It is essential reading for everyone in physics physical mathematics and the philosophy of science The authors model electrons as an ensemble of strings subject to the laws of classical statistical mechanics This model shows the Schrodinger equation to be the low speed descriptor of equilibrium and near equilibrium states but not of quantum jumps Like other statistical systems the electron ensemble passes through all possible intrinsic states As a high energy eigenstate electron ensemble passes through an appropriate structure it regeneratively produces an encompassing standing energy field Regenerative field buildup enables the electron to be a radiative band pass filter it is an efficient radiator at the buildup frequency and phase but all other frequencies and phases are blocked When a matching external field trigger is applied depending upon therelative phasings the standing energy is either absorbed or emitted with full directivity
