Weather risks and international migration: Panel-data evidence from Tajikistan Takeshima, Hiroyuki,Lambrecht, Isabel Brigitte,Akramov, Kamiljon,Ergasheva, Tanzila,2025-06-17 Climate change and increased frequency of abnormal weather are becoming growing threats to people s livelihood including in Central Asia These threats are particularly challenging in Tajikistan the poorest country in the Central Asia region Despite the fact that migration is prevalent and remittances account for a significant share of GDP evidence is scarce as to whether the decision to migrate is driven by weather shocks whether migration is used as mitigating tool against adverse weather shocks and how much of the loss in welfare is actually mitigated by such migration This study aims to narrow this knowledge gap by providing evidence based on a unique panel dataset from one of the poorest and agriculturally dependent regions in Tajikistan Khatlon province combined with a detailed set of various climate data In doing so we apply a novel approach through the least absolute shrinkage and selection operator LASSO to identify key weather shock variables among a vast set of potential variables associated with outmigration decisions in different districts Our results show that different types of weather shocks are associated with outmigration decisions in different districts within the province ranging from rainfall temperatures drought and windspeed in different subperiods throughout the year Regardless more abnormal weather is almost universally associated with more outmigration and outmigration significantly mitigates the potentially adverse effects on household consumption and food nutrition security in the origin households However more abnormal weather in the origin location is also associated with reduced remittances per month per migrant sent to the origin location Thus the capacity of migration to mitigate against weather shocks is still limited Combined with migration policies that increase net earnings during migration supplementary support to enhance climate resilience in home locations such as climate smart agriculture and development of the non farm sector remains critical

Energy, Sustainability and the Environment Fereidoon Sioshansi, 2011-06-02. The complexity of carbon

reduction and economic sustainability is significantly complicated by competing aspects of socioeconomic practices as well as legislative regulatory and scientific requirements and protocols. An easy to read and understand guide, *Sioshansi* along with an international group of contributors moves through the maze of carbon reduction methods and technologies providing steps and insights to meet carbon reduction requirements and maintaining the health and welfare of the firm. The book's three part treatment is based on a clear and rigorous exposition of a wide range of options to reduce the carbon footprint. Part 1 of the book, *Challenge of Sustainability*, examines the fundamental drivers of energy demand, economic growth, the need for basic energy services, and the interdependence of economic, political, environmental, social, equity, legacy, and policy issues. Part 2 of the book, *Technological Solutions*, examines how energy can be used to support basic energy service needs of homes, commercial, and industrial facilities and for other applications. Part 3 of the book, *case studies*, covers a number of innovative projects, initiatives, concepts, or self-imposed targets in different parts of the world with the aim of significantly reducing energy use and carbon footprint of a company, a community, a city, or an entire country. There was a widespread recognition among environmental engineers and energy economists of the importance of carbon reduction while sustaining the firm's economic growth. The only book to bring together both subjects into one easy to understand reference, *Carbon Reduction and Economic Sustainability*, not only clearly explains which option has the lowest energy carbon footprint but also which option would better suit the business in question. This includes carbon reduction for residential, transport, industrial, and public sectors. The only book to clearly explain the economic and environmental engineering aspects of carbon reduction, *Case studies* taken from a number of international projects, *Carbon reduction options for all sectors of society*, *The role of the planning system in carbon reduction*. **The Cultures of Knowledge Organizations** Wioleta Kucharska, Denise Bedford, 2023-08-28. *The Cultures of Knowledge Organizations* defines culture and the role it plays in supporting or impeding strategies. The book provides readers with an in-depth understanding of culture within knowledge organizations. This book develops a new and more robust definition and characterization of knowledge cultures than currently exist. **Glencoe World Geography** Richard G.
