Evaluation of Novel Approaches to Software Engineering Leszek Maciaszek, César González-Pérez, Stefan Jablonski, 2010-10-06 Software engineering is understood as a broad term linking science traditional engineering art and management and is additionally conditioned by social and external factors conditioned to the point that brilliant engineering solutions based on strong science showing artistic creativity and skillfully managed can still fail for reasons beyond the control of the development team Modern software engineering needs a paradigm shift commensurate with a change of the computing paradigm from 1 Algorithms to interactions and from procedural to object oriented programming 2 Systems development to systems integration 3 Products to services Traditional software engineering struggles to address this paradigm shift to interactions integration and services It offers only incomplete and disconnected methods for building information systems with fragmentary ability to dynamically accommodate change and to grow gracefully The principal objective of contemporary software engineering should therefore be to try to redefine the entire discipline and offer a complete set of methods tools and techniques to address challenges ahead that will shape the information systems of the future

Information Systems Reengineering for Modern Business Systems: ERP, Supply Chain and E-Commerce Management Solutions Valverde, Raul, Rao Talla, Malleswara, 2012-02-29

Businesses must constantly adapt to a dynamically changing environment that requires choosing an adaptive and dynamic information architecture that has the flexibility to support both changes in the business environment and changes in technology. In general, information systems reengineering has the objective of extracting the contents, data structures, and flow of data and process contained within existing legacy systems in order to reconstitute them into a new form for subsequent implementation. Information Systems Reengineering for Modern Business Systems: ERP, Supply Chain, and E-Commerce Management Solutions covers different techniques that could be used in industry in order to reengineer business processes and legacy systems into more flexible systems capable of supporting modern trends such as Enterprise Resource Planning, ERP, supply chain management systems, and e-commerce. This reference book also covers other issues related to the reengineering of legacy systems which include risk management and obsolescence management of requirements.

SysML for Systems Engineering Jon Holt, Simon Perry, 2008. This book provides a pragmatic introduction to the systems engineering modelling language the SysML aimed at systems engineering practitioners at any level of ability ranging from students to experts. The theoretical aspects and syntax of SysML are covered and each concept is explained through a number of example applications.

Principles of Health Interoperability: HL7 and SNOMED Tim Benson, 2010-05-06. Joined-up healthcare makes information available when and where it is needed to improve safety, efficiency, and effectiveness. Politicians may take interoperability between healthcare computer systems for granted, but it is non-trivial. Healthcare integration projects are notoriously under-estimated and come in over budget and over time. Joined-up healthcare depends on standards. The two leading standards are the SNOMED CT which is a clinical terminology semantics and HL7 Version 3 which is a specialised healthcare interoperability language syntax. Both are new, complex, and fit for purpose. Tim Benson believes there is an unmet need for a book on Healthcare Integration. Some health informatics textbooks include chapters on HL7 and/or SNOMED, but these are usually quite short and cannot provide even an adequate introduction. There is little of much value on the Internet or in journals or conference proceedings.
