A Selection of Image Analysis Techniques Yu-Jin Zhang, 2022-10-05 This book focuses on seven commonly used image analysis techniques. It covers aspects from basic principles and practical methods to new advancement of each selected technique to help readers solve image processing related problems in real life situations. The selected techniques include image segmentation, segmentation evaluation and comparison, saliency, object detection, motion analysis, mathematical morphology, methods for face recognition and expression classification. The author offers readers a three step strategy toward problem solving: first essential principles, then a detailed explanation, and finally a discussion on practical and working techniques for specific tasks. He also encourages readers to make full use of available materials from the latest developments and trends. This is an excellent book for those who do not have a complete foundation in image technology but need to use image analysis techniques to perform specific tasks in particular applications.

Remote Sensing Image Analysis: Including the Spatial Domain Steven M. de Jong, Freek D. van der Meer, 2007-07-26 Remote Sensing image analysis is mostly done using only spectral information on a pixel by pixel basis. Information captured in neighbouring cells or information about patterns surrounding the pixel of interest often provides useful supplementary information. This book presents a wide range of innovative and advanced image processing methods for including spatial information captured by neighbouring pixels in remotely sensed images to improve image interpretation or image classification. Presented methods include different types of variogram analysis, various methods for texture quantification, smart kernel operators, pattern recognition techniques, image segmentation methods, sub pixel methods, wavelets and advanced spectral mixture analysis techniques. Apart from explaining the working methods in detail, a wide range of applications is presented, covering land cover and land use mapping, environmental applications such as heavy metal pollution, urban mapping and geological applications to detect hydrocarbon seeps. The book is meant for professionals, PhD students and graduates who use remote sensing image analysis, image interpretation and image classification in their work related to disciplines such as geography, geology, botany, ecology, forestry, cartography, soil science, engineering and urban and regional planning.

The Nature and Growth of Modern Mathematics Edna Ernestine Kramer, 1982 Now available in a one volume paperback, this book traces the development of the most important mathematical concepts, giving special attention to the lives and thoughts of such mathematical innovators as Pythagoras, Newton, Poincare and Godel. Beginning with a Sumerian short story ultimately linked to modern digital computers, the author clearly introduces concepts of binary operations, point set topology, the nature of post relativity geometries, optimization and decision processes, ergodic theorems, epsilon delta arithmetization, integral equations, the beautiful ideals of Dedekind and Emmy Noether, and the importance of purifying mathematics. Organizing her material in a conceptual rather than a chronological manner, she integrates the traditional with the modern, enlivening her discussions with historical and biographical detail.

Data Analytics for Protein Crystallization Marc L. Pusey, Ramazan Savaş Aygün, 2017-11-27 This unique text reference presents an overview

of the computational aspects of protein crystallization describing how to build robotic high throughput and crystallization analysis systems The coverage encompasses the complete data analysis cycle including the set up of screens by analyzing prior crystallization trials the classification of crystallization trial images by effective feature extraction the analysis of crystal growth in time series images the segmentation of crystal regions in images the application of focal stacking methods for crystallization images and the visualization of trials Topics and features describes the fundamentals of protein crystallization and the scoring and categorization of crystallization image trials introduces a selection of computational methods for protein crystallization screening and the hardware and software architecture for a basic high throughput system presents an overview of the image features used in protein crystallization classification and a spatio temporal analysis of protein crystal growth examines focal stacking techniques to avoid blurred crystallization images and different thresholding methods for binarization or segmentation discusses visualization methods and software for protein crystallization analysis and reviews alternative methods to X ray diffraction for obtaining structural information provides an overview of the current challenges and potential future trends in protein crystallization This interdisciplinary work serves as an essential reference on the computational and data analytics components of protein crystallization for the structural biology community in addition to computer scientists wishing to enter the field of protein crystallization

Three-dimensional Computer Vision Olivier Faugeras, 1993 This monograph by one of the world's leading vision researchers provides a thorough mathematically rigorous exposition of a broad and vital area in computer vision the problems and techniques related to three dimensional stereo vision and motion The emphasis is on using geometry to solve problems in stereo and motion with examples from navigation and object recognition Faugeras takes up such important problems in computer vision as projective geometry camera calibration edge detection stereo vision with many examples on real images different kinds of representations and transformations especially 3 D rotations uncertainty and methods of addressing it and object representation and recognition His theoretical account is illustrated with the results of actual working programs Three Dimensional Computer Vision proposes solutions to problems arising from a specific robotics scenario in which a system must perceive and act Moving about an unknown environment the system has to avoid static and mobile obstacles build models of objects and places in order to be able to recognize and locate them and characterize its own motion and that of moving objects by providing descriptions of the corresponding three dimensional motions The ideas generated however can be used in different settings resulting in a general book on computer vision that reveals the fascinating relationship of three dimensional geometry and the imaging process

Metaheuristics and Optimization in Computer and Electrical Engineering Navid Razmjooy, Mohsen Ashourian, Zahra Foroozandeh, 2020-11-16 The use of artificial intelligence especially in the field of optimization is increasing day by day The purpose of this book is to explore the possibility of using different kinds of optimization algorithms to advance and enhance the tools used for computer and electrical engineering purposes
