Looking for Shumway and Stoffer's Time Series Analysis solution manual

I'm self-studying time series, and this book seems to be a bit inconsistent, also leaving many things implicit. I'm trying to grasp the subject, but without a professor (no money for it...) I'm trying to do the exercises, and the solution manual would be a really great help.

Capacity management is a core activity when designing and operating distributed software systems. Particularly enterprise application systems are exposed to highly varying workloads. Employing static capacity management this leads to unnecessarily high total cost of ownership due to poor resource usage efficiency. This thesis introduces a model driven online capacity management approach for distributed component based software systems called SLastic. The core contributions of this approach are a modeling language to capture relevant architectural information about a controlled software system, an architecture based online capacity management framework based on the common MAPE-K control loop architecture, model driven techniques supporting the automation of the approach, architectural runtime reconfiguration operations for controlling a system's capacity as well as an integration of the Palladio Component Model. A qualitative and quantitative evaluation of the approach is performed by case studies, lab experiments and simulation.
