Experimental Robotics VIII Bruno Siciliano, Paolo Dario, 2003-09-05 This book collects papers on the state of the art in experimental robotics Experimental Robotics is at the core of validating robotics research for

both its systems science and theoretical foundations Because robotics experiments are carried out on physical complex machines whose controllers are subject to uncertainty devising meaningful experiments and collecting statistically significant results pose important and unique challenges in robotics Robotics experiments serve as a unifying theme for robotics system science and algorithmic foundations These observations have led to the creation of the International Symposia on Experimental Robotics The papers of the book were presented at the 2002 International Symposium on Experimental Robotics

Robotics Goes MOOC Bruno Siciliano, 2025-06-08 It is often read in the media that AI and Robotics are the primary cause of technology unemployment AI and machine learning techniques are expected to take over lower level tasks while humans can spend more time with higher level tasks In perspective it can be said that jobs requiring boring cognitive tasks or repeatable and dangerous physical tasks will be considerably shredded by automation thanks to the wide adoption of AI Robotics technology to replace humans while jobs requiring challenging cognitive tasks or unstructured physical tasks will be suitably re engineered with the progressive introduction of AI Robotics technology to assist humans From the discussion above it should be clear that in a world populated by humans and robots issues arise that go beyond engineering and technology due to the impact resulting from the use of robots in various application scenarios The anthropization of robots cannot ignore the resolution of those ethical legal sociological economic ELSE problems that have so far slowed their spread in our society The final book of the Robotics Goes MOOC project enlightens the impact of using robotic technology in the main fields of application namely industrial robots as in Chapter 1 by Bischoff et al medical robotics as in Chapter 2 by Dario et al aerial robots as in Chapter 3 by Ollero et al orbital robotics as in Chapter 4 by Lampariello underwater robots in Chapter 5 by Antonelli and rescue robots as in Chapter 6 by Murphy The last part is devoted to the open dilemma of using and accepting robots in human co habited environments which is addressed in Chapter 7 on social robotics by Pandey and the very final chapter by Tamburrini on the important issues raised with roboethics
