Research, Quality, Competitiveness Attilio Stajano, 2008-09-22 The European Union EU was launched as a response to the economic dominance of the United States and to a lesser degree the Soviet Union The nations of Western Europe were too small to compete against large scale and diversified economies on their own Six countries eventually expanding to 27 and counting took a series of steps toward progressively deeper integration the removal of internal tariffs the construction of a common external tariff the elimination of many but not all non tariff barriers leading to a single market and the adoption of a common currency by 15 of the member states The EU today equals and even exceeds the U S on many key indicators of performance In the process two similar but nonetheless divergent models of social and economic life stand in contrast with each other The U S is more committed to capitalism and does little to dilute its harsh edges while the nations of Europe support wider social safety nets and more active regulation of commercial activity to mute the cruel aspects of the free market Until recently the economic dynamism of the U S called into question whether the so called European social model was sustainable in an era of globalization The EU was slipping in competitiveness and was being challenged by new global powers like China and India Although the U S economy has slowed there is little indication that European countries are capable of leveraging the situation to their advantage

What is Global Engineering Education For? The Making of International Educators, Part III Gary Downey, Kacey Beddoes, 2022-06-01 Global engineering offers the seductive image of engineers figuring out how to optimize work through collaboration and mobility Its biggest challenge to engineers however is more fundamental and difficult to better understand what they know and value qua engineers and why This volume reports an experimental effort to help sixteen engineering educators produce personal geographies describing what led them to make risky career commitments to international and global engineering education The contents of their diverse trajectories stand out in extending far beyond the narrower image of producing globally competent engineers Their personal geographies repeatedly highlight experiences of incongruence beyond home countries that provoked them to see themselves and understand their knowledge differently The experiences were sufficiently profound to motivate them to design educational experiences that could provoke engineering students in similar ways For nine engineers gaining new international knowledge challenged assumptions that engineering work and life are limited to purely technical practices compelling explicit attention to broader value commitments For five non engineers and two hybrids gaining new international knowledge fueled ambitions to help engineering students better recognize and critically examine the broader value commitments in their work A background chapter examines the historical emergence of international engineering education in the United States and an epilogue explores what it might take to integrate practices of critical self analysis more systematically in the education and training of engineers Two appendices and two online supplements describe the unique research process that generated these personal geographies especially the workshop at the U S National Academy of Engineering in which authors were prohibited from participating in discussions of their manuscripts Table of Contents Communicating Across Cultures Humanities in the International Education of Engineers Bernd Widdig Linking Language Proficiency and the Professions Michael Nugent Language Life and Pathways to Global Competency for Engineers and Everyone Else Phil McKnight Bridging Two worlds John M Grandin Opened Eyes From Moving Up to Helping Students See Gayle G Elliott What is Engineering for A Search for Engineering beyond Militarism and Free markets Juan Lucena Location Knowledge and Desire From Two Conservatisms to Engineering Cultures and Countries Gary Lee Downey Epilogue Beyond Global Competence Implications for Engineering Pedagogy Gary Lee Downey

National Science Foundation FY 1997 Authorization United States. Congress. House. Committee on Science. Subcommittee on Basic Research, 1996 **Design Thinking for Software Engineering** Jennifer Hehn, Daniel Mendez, Walter Brenner, Manfred Broy, 2022-02-13 This book explores the possibility of integrating design thinking into today s technical contexts Despite the popularity of design thinking in research and practice this area is still too often treated in isolation without a clear consistent connection to the world of software development The book presents design thinking approaches and experiences that can facilitate the development of software intensive products and services It argues that

design thinking and related software engineering practices including requirements engineering and user centric design UX approaches are not mutually exclusive Rather they provide complementary methods and tools for designing software intensive systems with a human centric approach Bringing together prominent experts and practitioners to share their insights approaches and experiences the book sheds new light on the specific interpretations and meanings of design thinking in various fields such as engineering management and information technology As such it provides a framework for professionals to demonstrate the potential of design thinking for software development while offering academic researchers a roadmap for further research

Reskilling the Workforce in the Labor Market: The Country Cases Meçik, Oytun, 2024-03-05 In the dynamic model of today s workforce marked by technological upheavals changing consumer preferences and global economic shifts a pressing challenge looms large the imperative for continuous adaptation through reskilling As the demand for specialized skills intensifies with technological advancements and the nature of work undergoes profound transformations individuals employers and societies grapple with the need to stay competitive The book Reskilling the Workforce in the Labor Market The Country Cases emerges as a beacon of solutions in this complex terrain addressing the critical facets of reskilling that are pivotal for thriving in the future job market The workforce is confronted with multifaceted challenges ranging from the disruptive impact of automation to the complexity of evolving job roles in a service oriented economy Individuals face the risk of being left behind if they do not acquire the necessary skills and education while employers contend with productivity gaps and high turnover due to a mismatch between job demands and employee capabilities Moreover societal issues such as skill gaps and rising unemployment call for a concerted effort to establish a culture of lifelong learning The high cost and limited availability of training programs along with time constraints and resistance to change further compound the challenges individuals and organizations face in navigating this reskilling imperative
