

Bluetooth™ Crispus Snap-In Antenna

Flexible low-profile design for rapid assembly on PCBs

Size: 20x30x4 mm

This is one of our standard Snap-In Antennas intended for use with all 2.4 GHz applications where very high performance is combined with low profile snap-in assembly directly on the printed circuit board. This half-wave antenna is independent of ground plane to ensure stable performance.

The environment around the antenna will influence the antenna impedance. In order to ensure 50 ohm impedance it is necessary to match the antenna with external components for each particular application.

It is important to note that, upon request, this standard concept can be customized according to your design.

Typical application areas are:

- Laptop PCs
- Desktop PCs
- Printers
- Instruments
- Network access points

Description

The Bluetooth Snap-In Antenna is a half-wave ($\frac{\lambda}{2}$) antenna of compact design intended for automated assembly (DFA) directly on the PCB without soldering.

The antenna easily snaps into place on PCBs.

Vector Control of Three-Phase AC Machines Nguyen Phung Quang, Jörg-Andreas Dittrich, 2008-12-11 The book deals with the problem area of the vector control of the three phase AC machines like that one of the induction motor with squirrel cage rotor IMSR the permanent magnet excited synchronous motor PMSM and that one of the doubly fed induction machine DFIM from the view of the practical development It is primarily about the use of the IMSR as well as the PMSM in the electrical drive systems at which the method of the field oriented control has been successful in the practice and about the use of the grid voltage oriented controlled DFIM in the wind power plants After a summary of the basic structure of a field oriented controlled three phase AC drive the main points of the design and of the application are explained The detailed description of the design rules forms the main emphasis of the book The description is expanded and made understandable by numerous formulae pictures and diagrams Using the basic equations first the continuous and then the discrete machine models of the IMSR as well as of the PMSM are derived The vectorial two dimensional current controllers which are designed with help of the discrete models are treated in detail in connection with other essential problems like system boundary condition and control variable limitation Several alternative controller configurations are introduced The voltage vector modulation the field orientation and the coordinate transformations are treated also from the view of the practical handling The problems like the parameter identification parameter adaptation and the management of machine states which are normally regarded as abstract are so represented that the book reader does not receive only attempts but also comprehensible solutions for his system The practical style in the description of the design rules of the drive systems are also continued consistently for the wind power systems using the DFIM The represented control concept is proven practically and can be regarded as pioneering for new developments The introduced control structures of the three machine types have led to a relatively mature stage of development in the practice Some disadvantages have nevertheless remained at these linear control concepts which have to be cleared only with nonlinear controllers Going out from the structural nonlinearity of the machines the suitable nonlinear models are derived After that nonlinear controllers are designed on the basis of the method of the exact linearization which proves to be the most suitable in comparison with other methods like backstepping based or passivity based designs

Watching the Directives Great Britain: Parliament: House of Commons: Science and Technology Committee, 2006-06-29 The EU Physical Agents Electromagnetic Fields Directive which was adopted in April 2004 and must be enshrined in law in EU member states by April 2008 sets out exposure limits designed to provide a minimum standard of protection from occupational exposure to electromagnetic fields EMF The Committee's report focuses on the impact of this Directive on the use of magnetic resonance imaging MRI equipment for diagnosis treatment and research use This is the first of three case studies under the Committee's overarching inquiry into the way scientific evidence and advice is used by the UK Government to influence policy at EU level It finds that there were failings in the way scientific advice was used to inform the Directive both in Brussels and in the UK The European Commission relied too heavily on one source of advice and was not sufficiently responsive to concerns raised by the magnetic resonance community whilst there were serious failings in the consultation process in the UK particular by the Health and Safety Executive and by the Health Protection Agency
