Transmission Pipeline Calculations And Simulations Manual:

Transmission Pipeline Calculations and Simulations Manual E. Shashi Menon, 2014-12-27 Transmission Pipeline Calculations and Simulations Manual is a valuable time and money saving tool to quickly pinpoint the essential formulae equations and calculations needed for transmission pipeline routing and construction decisions The manual's three part treatment starts with gas and petroleum data tables followed by self contained chapters concerning applications Case studies at the end of each chapter provide practical experience for problem solving Topics in this book include pressure and temperature profile of natural gas pipelines how to size pipelines for specified flow rate and pressure limitations and calculating the locations and HP of compressor stations and pumping stations on long distance pipelines Case studies are based on the author's personal field experiences Component to system level coverage Save time and money designing pipe routes well Design and verify piping systems before going to the field Increase design accuracy and systems effectiveness

Transport by Pipelines and Its Optimization Pablo Druetta, Remo Frabotta, Gustavo Luis Cavallo, 2024-12-10 This textbook introduces pipeline design one of the most efficient techniques for mass and energy transport available today The global economy heavily relies on pipelines However designing a pipeline is more complex than it might seem it involves many technical and economic factors that must work together to create an optimized system The book begins with basic concepts of pipelines including a description of the materials used heat transfer between the system and medium and the main components of pumping and compression stations which are vital for the subsequent chapters It then presents a simple yet detailed overview of these factors and introduces a mathematical methodology that combines them to deliver an optimized pipe design minimizing costs and reducing energy consumption The book also covers the transient verification of this design using well known balance equations and material property relationships for both incompressible and compressible fluids to validate the initial design Finally the book explores the analysis of multiphase pipelines where the goal is to transport a particular material e.g. solid using a different medium e.g. air or water

Corrosion and Reliability Assessment of Inspected Pipelines Rafael Amaya-Gómez, Emilio Bastidas-Arteaga, Mauricio Sánchez-Silva, Franck Schoefs, Felipe Muñoz, 2023-11-20 This book provides the most up to date advanced methods and tools for risk assessment of onshore pipelines These methods and tools are based primarily on information collected from ILI measurements and additional information about the soil surrounding the pipeline The book provides a better understanding how the defects grow and interact repulsion or attraction and their spatial variability In addition the authors contemplate new defects that evolve between inspections and how they could affect the pipeline's reliability A real world case is presented to reinforce the concepts presented in the book The book is structured into three parts i an introduction to onshore pipelines and the problem of corrosion ii a framework that deals with uncertainty for integrity programs for corroded pipelines and iii the applications of the methods presented in the book The book is ideal for researchers and field engineers in oil and gas transportation and

graduate and undergraduate engineering students interested in pipeline reliability assessments spatial variability and risk based inspections

Topics on Oil and Gas Ali Ismet Kanlı, Tye Ching Thian, 2023-12-20 Reservoir characterization is the model that characterizes reservoirs based on their ability to store and produce hydrocarbons Reservoir modeling is the process of creating a three dimensional representation of a given reservoir based on its petrophysical geological and geophysical properties Reservoir engineering is the formulation of development and production plans that will result in maximum recovery for a given set of economic environmental and technical constraints It is not a one time activity but needs continual updating throughout the production life of a reservoir Reservoir management is often defined as the allocation of resources to optimize hydrocarbon recovery from a reservoir while minimizing capital investments and operating expenses The oil and gas industry is divided into upstream and downstream sectors In general the upstream sector involves activities carried out at a reservoir while the downstream sector involves all petroleum processing activities carried out in a refinery Petroleum processing engineering involves all downstream crude oil processing operations from crude oil as the feedstock to final products such as gasoline kerosene diesel gas oil and lubricating oil Petroleum processing technology continues to develop in consideration of all types of sustainability related challenges This book provides a comprehensive overview of the oil and gas industry presenting the most recent research in the field

Risk Modeling, Analysis and Control of Multi-energy Systems Yonghua Song, Yi Ding, Minglei Bao, Sheng Wang, Changzheng Shao, 2023-06-08 This book focuses on the risk modeling analysis and control of multi energy systems considering cross sectorial failure propagation Both models and methods have been addressed with engineering practice This is accomplished by doing a thorough investigation into the modeling of system physics and reliabilities in both long and short term phases Different models and methods to evaluate the risk of multi energy systems considering various disturbances e g component failures load uncertainties and extreme weather are studied in detail Furthermore several risk control strategies for multi energy systems such as long term capacity planning and integrated demand response are analyzed in this book which is especially suited for readers interested in system risk management The book can benefit researchers engineers and graduate students in the fields of electrical and electronic engineering energy engineering complex network and control engineering etc
