## THE LIFE CYCLE OF A BUTTERFLY

A butterfly is a flying insect with large wings, 2 antennae, 6 legs, 3 body parts and an exoskeleton (a skeleton on the outside of the body). The butterfly starts its life as a small, round or oval egg, normally laid on a leaf. The larva, which is also called a caterpillar, hatches from the egg and starts to eat. The larva stage is usually quite short. It will spend its lifetime eating, beginning with its own eggshell and continuing on with the leaf that it was born on. At the end of the larva stage the caterpillar turns in a pupa. This is known as the resting stage. You may have seen the pupa (also called a chrysalis) hanging from the branch of a tree. This third stage is where the fully grown caterpillar changes into a butterfly inside the pupa. The final and forth stage is when an adult butterfly emerges from the pupa. It only takes around 3 to 4 hours for the butterfly to learn to fly. Most butterflies sip on the nectar from flowers or the liquid from rotting fruit.

### SUMMARIZE THE 4 STAGES OF THE BUTTERFLY LIFECYCLE
