Series 760 P/E Valve Positioners

Pneumatic valve positioners for cost-effective valve control

The Series 760 Valve Positioners provide a cost effective, universal approach to your valve control. Their modular concept allows all models to be built on the base pneumatic unit model 760P. The electro-pneumatic model 760E is created by installing an I/P Transducer into the base. A wide range of accessories is easily installed inside the unit.

The 760 base pneumatic unit provides split ranging, direct or reverse action, and single or double action without requiring additional parts. The mechanical linkage and characterized cam can be replaced in the field to configure the positioner for use with either a linear or rotary actuator. Key design features include non-interaction of the zero and span adjustments.

Series 760 Valve Positioners include provisions for internal limit switch mounting and position feedback devices without requiring additional housings. Thus, the need to stack housings that impede access to the main enclosure is eliminated.

Features and Benefits

- Universal design and choice of interchangeable NAMUR IEC 534-6 rectilinear VDMA/VDI 3845 rotary mountings provide wide application flexibility
- Double-acting or single-acting service and split ranging afford application versatility in a single unit
- Non-interaction of the zero and span adjustments and CAMLOC™ cam locking mechanism significantly reduce the calibration and setup time
- Modular design reduces inventory because it allows interchangeable spare parts
- Comes standard with 3 cams-linear, quick opening, and equal % for application versatility
