

Transformation Kit—Quick Guide

1. Label one closed micro test tube +pGLO and another -pGLO. Label both tubes with your group's name. Place them in the foam tube rack.
2. Open the tubes and using a sterile transfer pipet, transfer 250 μ l of transformation solution (CaCl₂).
3. Place the tubes on ice.
4. Use a sterile loop to pick up a single colony of bacteria from your starter plate. Pick up the +pGLO tube and immerse the loop into the transformation solution at the bottom of the tube. Spin the loop between your index finger and thumb until the entire colony is dispersed in the transformation solution (with no floating chunks). Place the tube back in the tube rack in the ice. Using a new sterile loop, repeat for the -pGLO tube.
5. Examine the pGLO plasmid DNA solution with the UV lamp. Note your observations. Immerse a new sterile loop into the plasmid DNA stock tube. Withdraw a loopful. There should be a film of plasmid solution across the ring. This is similar to seeing a soapy film across a ring for blowing soap bubbles. Mix the loopful into the cell suspension of the +pGLO tube. Close the tube and return it to the rack on ice. Also close the -pGLO tube. Do not add plasmid DNA to the -pGLO tube. Why not?
6. Incubate the tubes on ice for 10 minutes. Make sure to push the tubes all the way down in the rack so the bottom of the tubes stick out and make contact with the ice.

The KBMT Project Kenneth Goodman, Kenneth W. Goodman, Sergei Nirenburg, 1991-07-15 Machine translation of natural languages is one of the most complex and comprehensive applications of computational linguistics and artificial intelligence. This is especially true of knowledge based machine translation KBMT systems which require many knowledge resources and processing modules to carry out the necessary levels of analysis representation and generation of meaning and form. The number of real world problems tasks and solutions involved in developing any realistic size knowledge based machine translation system is enormous. It is thus difficult for researchers in the field to learn what a system really does. This book fills that need with a detailed case study of a KBMT system implemented at the Center for Machine Translation at Carnegie Mellon University. The research consists in part of the creation of a system for translation between English and Japanese. The corpora used in the project were manuals for installing and maintaining IBM personal computers; sponsorship by IBM through its Tokyo Research Laboratory. Individual chapters describe the interlingua texts used in knowledge based machine translation, the grammar formalism embodied in the system, the grammars and lexicons and their roles in the translation process, the process of source language analysis, an augmentation module that interactively and automatically resolves ambiguities remaining after source language analysis, and the generator which produces target language sentences. Detailed appendices illustrate the process from analysis through generation. This book is intended for developers, researchers, and advanced students in natural language processing and computational linguistics, including all those who have an interest in machine translation and machine aided translation.

The Physics Quick Reference Guide Richard Cohen, 1998-04-15 This book consists of material in the first chapter of *A Physicist's Desk Reference*, updated and supplemented by additional new data. It is a self contained quick reference guide to the most commonly used mathematical formulas, tables of data, symbols, units, standard nomenclature, and fundamental constants in physics. A useful bibliography to more complete sources of data is also included.

Intelligent Language Tutors V. Melissa Holland, Jonathan D. Kaplan, Michelle R. Sams, 2014-01-09 The techniques of natural language processing (NLP) have been widely applied in machine translation and automated message understanding but have only recently been utilized in second language teaching. This book offers both an argument for and a critical examination of this new application, with an examination of how systems may be designed to exploit the power of NLP, accommodate its limitations, and minimize its risks. This volume marks the first collection of work in the U.S. and Canada that incorporates advanced human language technologies into language tutoring systems, covering languages as diverse as Arabic, Spanish, Japanese, and English. The book is organized into sections that express the levels of analysis dealt with in learning and teaching a language and with the tasks of the student as writer, reader, conversant, and actor in the world. These sections bring together research by specialists in linguistics, artificial intelligence, psychology, instructional design, and language teaching. In addition to providing detailed

descriptions of working systems amply illustrated with screens from lesson and authoring interfaces the contributors address a spectrum of common issues What can current NLP technology contribute to computer assisted language instruction and to research on language learning How can this technology meet the demands of pedagogical theory for communicative language teaching in authentic contexts How can designers constrain tutoring environments to ensure accurate analysis of learners language What can NLP based systems teach us about language acquisition about linguistic theory and about theories of language pedagogy What lessons have been learned in using these systems to date Discipline specific issues are illuminated as well the relative merits of the major syntactic frameworks for NLP based language tutoring the adaptation of theories like lexical conceptual structure to support semantic interpretation the integration of input language with visual microworlds and dialogue games the pragmatics of the tutoring discourse the selection of instructional principles to guide system design and the accomodation of design to individual differences and learner styles A concluding section assesses this work from larger theoretical and practical perspectives experimental psychology and psycholinguistics linguistics language teaching and second language acquisition research
