### Transportation Planning Process

The transportation planning process has a lot of similarity to the problem solving process. The following table gives the major differences between the two processes.

Sl No	Problem Solving	Transportation Planning
1	Problem solving lacks foresight ness to take advantage of the forthcoming innovations	Problem definition and Objective relevant to planning condition. They change themselves, so innovations are used
2	It is not Programmed Basis	Usually Programmed basis
3	Our concern may be for the dimension and performance of a vehicle to be replaced within a shorter period of time from now	We may be concerned with about location Transit
4	Breadth of problem: i.e. parking, congestion	Study of broader situation i.e whole city
5	Immediate solution is required so it is completed within shorter period	Implemented Sequentially

### 2.2 Types of Planning Methodologies

1. Projective planning.
2. Deductive planning.
3. Objective planning.

#### **Projective planning:**

It is a base for planning. It is an open Extrapolation method.

Example: Traffic flows, Vehicle ownership, Residential Densities, Population trends, Economic Growth, Socio- economic indices.

**Deductive planning:** Synthesis the future state of the system from laws, equations or models that are one in its behaviour.

Example: Analysis of specific projects and operational activities such as bypasses, regional centers, transport terminals, one-way streets can be effectively analyzed deductive planning process.
