Current State of Postural Research - Moving Beyond the Balance Platform
Emily Keshner,Joyce Fung,Tanvi Bhatt,2024-02-05 The concept of posture control has morphed over the past century from a reflex hierarchically controlled innate behavior to a complex and adaptable motor act highly influenced by cognitive processes as well as confidence and attentiveness of the performer In addition multisensory control of posture has been recognized as a process of fusion and integration rather than summation and inhibition Advances in computational modeling and imaging have revealed that higher cortical centers are involved in production of what were previously believed to be stereotypical triggered reactions Emerging evidence now supports the idea that postural behaviors are regulated by distributed control in the neuraxis and shaped by dynamic interactions of sensorimotor processes in a task and context dependent manner
