Numerical Calculations for Process Engineering Using Excel VBA Chi M. Phan, 2023-12-01 Numerical Calculations for Process Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA

programming and Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in different variations tailored to particular applications Some macros are combined with each other to solve engineering problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining golden section search with Euler's method to optimise a reactor and combining bisection code and Euler's method to solve steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor conversion batch reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book is a helpful resource for postgraduate students and engineers

Handbook of Test Problems in Local and Global Optimization Christodoulos A. Floudas, Panos M. Pardalos, Claire Adjiman, William R. Esposito, Zeynep H. Gümus, Stephen T. Harding, John L. Klepeis, Clifford A. Meyer, Carl A. Schweiger, 2013-03-09 Significant research activities have taken place in the areas of local and global optimization in the last two decades Many new theoretical computational algorithmic and software contributions have resulted It has been realized that despite these numerous contributions there does not exist a systematic forum for thorough experimental computational testing and evaluation of the proposed optimization algorithms and their implementations Well designed nonconvex optimization test problems are of major importance for academic and industrial researchers interested in algorithmic and software development It is remarkable that even though nonconvex models dominate all the important application areas in engineering and applied sciences there is only a limited class of reported representative test problems This book reflects our long term efforts in designing a benchmark database and it is motivated primarily from the need for nonconvex optimization test problems The present collection of benchmarks includes test problems from literature studies and a large class of applications that arise in several branches of engineering and applied science
