theoretical descriptions methodological tools and an approach that encompasses various fields of musicology cultural studies semiotics discourse analysis media studies and political and social sciences The author argues that protest songs should be taken as a musical genre on their own He points out that the general approach when discussing these songs has been so far that of either analyzing the lyrics or the social context For some reason the music itself has been often overlooked This book attempts to fill this gap Its central thesis is that a complete overview of these repertoires demands a thorough interaction among contextual lyrical and musical elements together To accomplish this the author develops a novel model that systemizes and investigates musical repertoires The model is then applied to four case studies those too chosen among topics that are little or not at all frequented by scholars
