*An Introduction to Particle Physics and the Standard Model* Robert Mann,2011-07-01 An Introduction to the Standard

Model of Particle Physics familiarizes readers with what is considered tested and accepted and in so doing gives them a grounding in particle physics in general. Whenever possible Dr Mann takes an historical approach showing how the model is linked to the physics that most of us have learned in less challenging areas. Dr Mann reviews special relativity and classical mechanics, symmetries, conservation laws and particle classification, then working from the tested paradigm of the model itself he describes the Standard Model in terms of its electromagnetic, strong and weak components. Explores the experimental tools and methods of particle physics. Introduces Feynman diagrams, wave equations and gauge invariance building up to the theory of Quantum Electrodynamics. Describes the theories of the Strong and Electroweak interactions. Uncovers frontier areas and explores what might lie beyond our current concepts of the subatomic world. Those who work through the material will develop a solid command of the basics of particle physics. The book does require a knowledge of special relativity, quantum mechanics and electromagnetism but most importantly it requires a hunger to understand at the most fundamental level why things exist and how it is that anything happens. This book will prepare students and others for further study but most importantly it will prepare them to open their minds to the mysteries that lie ahead. Ultimately the Large Hadron Collider may prove the model correct, helping so many realize their greatest dreams, or it might poke holes in the model leaving us to wonder an even more exciting possibility that the answers lie in possibilities so unique that we have not even dreamt of them.

*Computational Science — ICCS 2004* Marian Bubak, Geert D. van Albada, Peter M.A. Sloot, Jack Dongarra, 2004-10-11. The International Conference on Computational Science ICCS 2004 held in Krakow, Poland, June 6-9, 2004, was a follow up to the highly successful ICCS 2003 held at two locations in Melbourne, Australia and St Petersburg, Russia. ICCS 2002 in Amsterdam, The Netherlands and ICCS 2001 in San Francisco, USA. As computational science is still evolving in its quest for subjects of investigation and efficient methods, ICCS 2004 was devised as a forum for scientists from mathematics and computer science as the basic computing disciplines and application areas interested in advanced computational methods for physics, chemistry, life sciences, engineering, arts and humanities as well as computer system vendors and software developers. The main objective of this conference was to discuss problems and solutions in all areas, to identify new issues, to shape future directions of research and to help users apply various advanced computational techniques. The event harvested recent developments in computational grids and next-generation computing systems, tools, advanced numerical methods, data-driven systems and novel applications, such as complex systems, nanotechnology, physics and population evolution.
