Pattern Recognition Walter Kropatsch,Robert Sablatnig,Allan Hanbury,2005-09-14 It is both an honor and a pleasure to hold the 27th Annual Meeting of the German Association for Pattern Recognition DAGM 2005 at the Vienna University of Technology Austria organized by the Pattern Recognition and Image Processing PRIP Group We received 122 contributions of which we were able to accept 29 as oral presentations and 31 as posters Each paper received three reviews upon which decisions were made based on correctness presentation technical depth scientific significance and originality The selection as oral or poster presentation does not signify a quality grading but reflects attractiveness to the audience which is also reflected in the order of appearance of papers in these proceedings The papers are printed in the same order as presented at the symposium and posters are integrated in the corresponding thematic session In putting these proceedings together many people played significant roles which we would like to acknowledge First of all our thanks go to the authors who contributed their work to the symposium Second we are grateful for the dedicated work of the 38 members of the Program Committee for their effort in evaluating the submitted papers and in providing the necessary decision support information and the valuable feedback for the authors Furthermore the Program Committee awarded prizes for the best papers and we want to sincerely thank the donors We were honored to have the following three invited speakers at the conference Jan P

Intelligent Problem Solving. Methodologies and Approaches Rasiah Logananthara,Günther Palm,Moonis Ali,2003-07-31 The focus of the papers presented in these proceedings is on employing various methodologies and approaches for solving real life problems

Although the mechanisms that the human brain employs to solve problems are not yet completely known we do have good insight into the functional processing performed by the human mind. On the basis of the understanding of these natural processes scientists in the field of applied intelligence have developed multiple types of artificial processes and have employed them successfully in solving real life problems. The types of approaches used to solve problems are dependant on both the nature of the problem and the expected outcome. While knowledge based systems are useful for solving problems in well understood domains with relatively stable environments the approach may fail when the domain knowledge is either not very well understood or changing rapidly. The techniques of data discovery through data mining will help to alleviate some problems faced by knowledge based approaches to solving problems in such domains. Research and development in the area of artificial intelligence are influenced by opportunity needs and the availability of resources. The rapid advancement of Internet technology and the trend of increasing bandwidths provide an opportunity and a need for intelligent information processing thus creating an excellent opportunity for agent based computations and learning. Over 40% of the papers appearing in the conference proceedings focus on the area of machine learning and intelligent agents clear evidence of growing interest in this area.

[Planting the Seeds of Algebra, PreK-2](#) Monica Neagoy, 2012-04-20 The subject of algebra has always been important in American secondary mathematics education. However algebra at the elementary level has been garnering increasing attention and importance over the past 15 years. There is consequently a dire need for ideas suggestions and models for how best to achieve pre algebraic instruction in the elementary grades. *Planting the Seeds of Algebra* will empower teachers with theoretical and practical knowledge about both the content and pedagogy of such instruction and show them the different faces of algebra as it appears in the early grades. The book will walk teachers of young children through many examples of K-6 math lessons and unpack step by step the hidden connections to higher algebra. After reading this book teachers will be better equipped.

A Primer of Analytic Number Theory Jeffrey Stopple, 2003-06-23 This 2003 undergraduate introduction to analytic number theory develops analytic skills in the course of studying ancient questions on polygonal numbers perfect numbers and amicable pairs. The question of how the primes are distributed amongst all the integers is central in analytic number theory. This distribution is determined by the Riemann zeta function and Riemann's work shows how it is connected to the zeroes of his function and the significance of the Riemann Hypothesis. Starting from a traditional calculus course and assuming no complex analysis the author develops the basic ideas of elementary number theory. The text is supplemented by series of exercises to further develop the concepts and includes brief sketches of more advanced ideas to present contemporary research problems at a level suitable for undergraduates. In addition to proofs both rigorous and heuristic the book includes extensive graphics and tables to make analytic concepts as concrete as possible.
