Advanced Problem Solving Using Maple William P Fox, William Bauldry, 2020-11-09 *Advanced Problem Solving Using Maple™ Applied Mathematics Operations Research Business Analytics and Decision Analysis* applies the mathematical modeling process by formulating building solving analyzing and criticizing mathematical models Scenarios are developed within the scope of the problem solving process The text focuses on discrete dynamical systems optimization techniques single variable unconstrained optimization and applied problems and numerical search methods Additional coverage includes multivariable unconstrained and constrained techniques Linear algebra techniques to model and solve problems such as the Leontief model and advanced regression techniques including nonlinear logistics and Poisson are covered Game theory the Nash equilibrium and Nash arbitration are also included Features The text s case studies and student projects involve students with real world problem solving Focuses on numerical solution techniques in dynamical systems optimization and numerical analysis The numerical procedures discussed in the text are algorithmic and iterative Maple is utilized throughout the text as a tool for computation and analysis All algorithms are provided with step by step formats About the Authors William P Fox is an emeritus professor in the Department of Defense Analysis at the Naval Postgraduate School Currently he is an adjunct professor Department of Mathematics the College of William and Mary He received his PhD at Clemson University and has many publications and scholarly activities including twenty books and over one hundred and fifty journal articles William C Bauldry Prof Emeritus and Adjunct Research Prof of Mathematics at Appalachian State University received his PhD in Approximation Theory from Ohio State He has published many papers on pedagogy and technology often using Maple and has been the PI of several NSF funded projects incorporating technology and modeling into math courses He currently serves as Associate Director of COMAP s Math Contest in Modeling MCM

Reliability Data Analysis with Excel and Minitab Kenneth S. Stephens, 2011-08-30 Many reliability engineers are gainfully employed in considerations of the physical nature of components and systems bringing to bear theories and methodologies of physics electronics mechanics material science chemistry and so on But when a product has been designed and manufactured its performance in terms of durability strength and life become a matter of test measurement and analysis Statistical theories and methodologies provide a large number of analytical tools to assist the reliability engineer in studying the performance of products and the fruits of the physical considerations even revealing further improvements that can be made in the physical properties Hence reliability is a multidisciplined field of endeavor Statistical theories and methodologies allow estimation of important characteristics as well as levels of confidence or assurance or lack thereof with respect to the estimations They also provide direction in actions necessary to improve estimates and confidence levels if results are too variable to render important decisions Some derivations are contained in this text but the approach here is meant to be more practical in following each topic introduced and expanded with examples On each topic covered reasonably practical examples are used to illustrate and

demonstrate the procedures introduced and discussed For all of these examples either Excel files or Minitab files or both have been prepared available from Quality Press They can be readily accessed and opened directly in their respective software packages to permit the preparation of new files specifically for use by the reader This book provides a much needed theoretical text to aid advanced reliability engineering data analysis Applications using Excel and Minitab support a broad span of probability applications for reliability data analysts I most strongly recommend this book for seasoned Six Sigma Black Belts or statisticians who must support Design for Six Sigma applications for new product development projects It is rich in food for thought as well as providing a most nourishing banquet for consumption by engineers it is not for light reading as a snack but it must be consumed as a seven course meal Gregory H Watson Chairman International Academy for Quality ASQ Past President and Fellow **Advanced Problem Solving with Maple** William P.
