

We are learning to: Calculate the volume of a sphere.

$$\text{Volume of a Sphere} = \frac{4}{3}\pi r^3$$

Ex1 Find the volume of the sphere below.

Solution

$$\begin{aligned}\text{Volume} &= \frac{4}{3} \times \pi \times 3^3 \\ &= 36\pi\text{cm}^3 \\ &= 113.1\text{cm}^3\end{aligned}$$

Ex2 Which of the following shapes has the largest volume?

Solution

The sphere has the largest volume.

$$\begin{aligned}\text{Sphere} &= \frac{4}{3} \times \pi \times 6^3 \\ &= 288\pi\text{cm}^3\end{aligned}$$

$$\begin{aligned}\text{Cylinder} &= \pi \times 11^2 \times 2 \\ &= 242\pi\text{cm}^3\end{aligned}$$

- Developing learners will be able to calculate the volume of a sphere.
- Secure learners will be able to find a missing length in a sphere given its volume.
- Excelling learners will be able to solve unfamiliar problems using their knowledge of calculating the volume of a sphere.

Non-Renewable Resource Issues Richard Sinding-Larsen,Friedrich-W. Wellmer,2012-03-30 All the solid fuels fossil energy and mineral commodities we use come out of the Earth Modern society is increasingly dependent on mineral and fossil energy sources They differ in availability cost of production and geographical distribution Even if solid fuels fossil energy resources and mineral commodities are non renewable the extracted metals can to a large extent be recycled and used again and again Although the stock of these secondary resources and their use increases the world still needs and will continue to need primary mineral resources for the foreseeable future Growing demands have begun to restrict availability of these resources The Earth is not running out of critical mineral resources at least for the near future but the ability to explore and extract these resources is being restricted in many regions by competing land use as well as political and environmental issues Extraction of natural resources requires a clear focus on sustainable development involving economic environmental and socio cultural aspects Although we do not know what the most important resources will be in 100 years from now we can be quite certain that society will still need energy and a wide range of raw materials These resources will include oil and gas coal uranium thorium geothermal metallic minerals industrial and specialty minerals including cement raw materials rare earth elements A global approach for assessing the magnitude and future availability of these resources is called for an approach that with appropriate international collaboration was started within the triennium of the International Year of Planet Earth Some global mineral resource assessments involving inter governmental collaboration have already been initiated The International Year of Planet Earth helped to focus attention on how the geosciences can generate prosperity locally and globally as well as sustainability issues in both developed and developing countries
