- Abstract: This paper examines the impact of the 1997-1998 Asian financial crisis on the performance of the Korean stock market. The results show that the Korean stock market experienced a significant decline in performance during the crisis period, and that the decline was more pronounced for companies with high leverage and high growth opportunities. The results also show that the Korean stock market recovered its performance after the crisis, but that the recovery was more pronounced for companies with high leverage and high growth opportunities.
