Contexts of Learning Mathematics and Science Sarah J. Howie, Tjeerd Plomp, 2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two

different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and or science achievement

Statistical Methods in Education and Psychology A.K. Kurtz, S.T. Mayo, 2012-12-06 This book is intended for use in the elementary statistics course in Education or in Psychology While it is primarily designed for use in the first semester of a two semester course it may also be used in a one semester course There are not five or ten competing texts the number is much closer to fifty or a hundred Why then should we write still another one A new statistics text for use in Education and Psychology is to some slight extent comparable to a new translation or edition of the Bible Most of it has been said before but this time with a difference The present writers realize that elementary statistics students know very little about the subject even the meaning of it is all Greek to them This text covers the basic course in depth with examples using real data from the real world It of course contains the usual reference tables and several new ones it gives the appropriate formulas every time and it accurately depicts all graphs It is so comprehensive that if instructors can't find their own special areas of interest covered then those interests probably don't belong in a basic text

Statistics Applied to Clinical Studies Ton J. Cleophas, Aeilko H. Zwinderman, 2012-02-07 Thanks to the omnipresent computer current statistics can include data files of many thousands of values and can perform any exploratory analysis in less than seconds This development however fascinating generally does not lead to simple results We should not forget that clinical studies are mostly for confirming prior hypotheses based on sound arguments and the simplest tests provide the best power and are adequate for such studies In the past few years the authors of this 5th edition as teachers and research supervisors in academic and top clinical facilities have been able to closely observe the latest developments in the field of clinical data analysis and they have been able to assess their performance In this 5th edition the 47 chapters of the previous edition have been maintained and upgraded according to the current state of the art and 20 novel chapters have been added after strict selection of the most valuable and promising novel methods The novel methods are explained using practical examples and step by step analyses readily accessible for non mathematicians All of the novel chapters have been internationally published by the authors in peer reviewed journal including the American Journal of Therapeutics the European Journal of Clinical Investigation The International journal of Clinical Pharmacology and therapeutics and other journals and permission is granted by all of them to use this material in the current book We should add that the authors are well qualified in their fields of knowledge Professor Zwinderman is president elect of the International Society of Biostatistics and Professor Cleophas is past president of the American College of Angiology From their expertise they should be able to make adequate selections of modern methods for clinical data analysis for the benefit of

physicians students and investigators The authors although from a different discipline one clinician and one statistician have been working and publishing together for over 10 years and their research of statistical methodology can be characterized as a continued effort to demonstrate that statistics is not mathematics but rather a discipline at the interface of biology and mathematics They firmly believe that any reader can benefit from this clinical approach to statistical data analysis
