Artificial Intelligence Max Lungarella, Fumiya Iida, Josh Bongard, Rolf Pfeifer, 2007-12-03 This Festschrift volume published in celebration of the 50th Anniversary of Artificial Intelligence includes 34 refereed papers written by leading researchers in the field of Artificial Intelligence. The papers were carefully selected from the invited lectures given at the 50th Anniversary Summit of AI held at the Centro Stefano Franscini Monte Verit Ascona Switzerland July 9-14 2006. The summit provided a venue for discussions on a broad range of topics.

Connected Learning L. Lynn Thigpen, 2020-04-21 How does the world's oral majority of adults with limited formal education really prefer to learn? Few pause long enough to ask those who eschew print. The result of scholarly research and prolonged immersion in the Cambodian culture, *Connected Learning* exposes the truth about orality: the shame associated with limited formal education, the unfortunate misnomer that is orality, the place of spirituality, grace, and hope, and the obvious but overlooked learning preferences ALFE have. Different ways of learning and knowing, a different epistemology and culture from print learners, even though we all begin alike. The choice is not between Ong's orality or literacy, but between learning from people or from print. Dr. Thigpen, a veteran cross-cultural worker, shares remedies for the hegemony and inequities unwittingly fostered by the literate minority. In a dominant culture where learning from people is prime, how can educators with a preference for print adapt? Providing an important tool in the Learning Quadrants diagram, *Connected Learning* advises teaching to the quadrant and calls for seven necessary shifts in teaching. Anyone versed in orality will admit these findings have global implications and applications. Steffen, the reader who heeds, will positively impact a huge portion of humanity.

Learning Deep Textwork René-Marcel Kruse, Benjamin Säfken, Alexander Silbersdorff, Christoph Weisser, 2021 Artificial intelligence is considered to be one of the most decisive topics in the 21st century. Deep learning algorithms, which are the basis of many artificial intelligence applications, are of central interest for researchers but also for students that strive to build up academic knowledge and practical competencies in this field. The Deep Learning Seminar at the University of Göttingen follows the central notion of the Humboldtian model of higher education and offers graduate students of applied statistics the opportunity to conduct their own research. The quality of the results motivated us to publish the most promising seminar papers in this volume. For the selected papers, a review process was conducted by the lecturers. The presented contributions focus on applications of deep learning algorithms for text data. Natural language processing methods are, for example, applied to analyse data from Twitter, Telegram, and Newspapers. The research applications allow the reader to gain deep insights into some of the latest developments in the field of artificial intelligence and natural language.

Paradigm for Business Communication across Cultures: Theoretical Highlights for Practice Dr. Yongqiang LIU _

□_2015-01-01 Today's global citizens operate business and management endeavors on a global scale Globalization generates an increasing demand for effective communication in diverse cultural contexts and challenges the relevance of culture in operating businesses in the global village Communication differences are apparent in many scenarios Expatriates of international organizations operating abroad adopt their native cultural values to motivate employees of foreign cultures with an entirely different perspective They use one culture's motives to move people from other cultures In global marketing communication the communicators use values systems of their native culture to develop advertising for other cultures They use categorizations of one culture to describe others Such divergence in attitudes perspectives and priorities of suppliers and customers with different cultural backgrounds have led to many project failures in international organizations An in depth understanding of cultural backgrounds and the potential impact on communication of the people one is interacting with can increase the probability of business success among investors managers entrepreneurs and employees operating in diverse cultures However effective cross cultural business communication needs to recognize and adopt an interdisciplinary perspective in understanding the cultural forces Leung K et al 2005 Therefore we need a multidisciplinary paradigm to carry on effective and successful business communication in our contemporary global village _

Albrecht, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are subjects of the contributions to this volume There are contributions reporting successful applications of the technology to the solution of industrial commercial problems This may well reflect the maturity of the technology notably in the sense that real users of modelling prediction techniques are prepared to accept neural networks as a valid paradigm Theoretical issues also receive attention notably in connection with the radial basis function neural network Contributions in the field of genetic algorithms reflect the wide range of current applications including for example portfolio selection filter design frequency assignment tuning of nonlinear PID controllers These techniques are also used extensively for combinatorial optimisation problems

99 Ideas and Activities for Teaching English Learners with the SIOP Model MaryEllen Vogt, Jana Echevarría, 2008 This text is an ideal companion to Making Content Comprehensible for English Learners The SIOP Model The 99 ideas and activities include a few familiar techniques that have been shown to be especially effective for ELLs as well as many new ideas to SIOP teachers Mathematical Problem Solving Peter Liljedahl, Manuel Santos-Trigo, 2019-02-12 This book contributes to the field of mathematical problem solving by exploring current themes trends and research perspectives It does so by addressing five broad and related dimensions problem solving heuristics problem solving and technology inquiry and problem posing in mathematics education assessment of and through problem solving and the problem solving environment Mathematical problem solving has long been recognized as an important aspect of mathematics teaching mathematics and learning mathematics It has influenced mathematics curricula around the world with calls for the teaching of problem solving as well as the teaching of mathematics through problem solving And as such it has been of interest to mathematics education researchers for as long as the field has existed Research in this area has generally aimed at understanding and relating the processes involved in solving problems to students development of mathematical knowledge and problem solving skills The accumulated knowledge and field developments have included conceptual frameworks for characterizing learners success in problem solving activities cognitive metacognitive social and affective analysis curriculum proposals and ways to promote problem solving approaches **Brain Networks for Studying Healthy and Pathological Aging Mechanisms and Intervention Efficacy** Christos Frantzidis, Ana B. Vivas, Panagiotis D. Bamidis, 2020-11-18 Previous studies showed that both healthy and pathological aging are associated with changes in brain structure and function of the mature human brain The most prominent anatomical alteration are changes in prefrontal cortex morphology volume loss and reduced white matter integrity and hippocampal atrophy Cognitive decline affects mainly the

performance of episodic memory speed of sensory information processing working memory inhibitory function and long term memory It has been also proposed that due to the aforementioned changes the aging brain engages in compensatory brain mechanism such as a broader activation of cortical regions mainly frontal rather than specialized activation Evidence suggests that similar changes occur with pathological aging but to a greater extent In this case information flow is disrupted due to neurodegeneration functional activation of posterior occipito temporal regions is decreased and as a consequence the brain fails to process sensorial input in the ventral pathway and cognitive deficits appear In the last years functional alterations associated with aging have been studied using the mathematical notion of graph theory that offers an integrative approach since it examines different properties of the brain network 1 Organization level 2 amount of local information processing 3 information flow 4 cortical community structure and 5 identification of functional anatomical hubs So graph theory offers an attractive way to model brain networks organization and to quantify their pathological deviations Previous studies have already employed this mathematical notion and demonstrated that age related neurodegeneration is often accompanied by loss of optimal network organization either due to diminished local information processing or due to progressive isolation of distant brain regions They have also found that changes in network properties may be present even in the preclinical phase which could be taken as a biological marker of disease
